Lattice parameter determinations with an x-ray spectrogoniometer by the Debye-Scherrer method and the effect of specimen condition. Henry M. Otte—1536
Polygonization in bent zinc crystals. P. P. Sinha and Paul A. Beck—1222
Role of crystal structure in diffusion. I. Diffusion paths in closest-packed crystals. Leonid V. Azároff—1658
Role of crystal structure in diffusion. II. Activation energies for diffusion in closest-packed structure. Leonid V. Azároff—1663
Single-crystal tin films. Richard W. Vook—1557
Structure of Alnico V. Robert B. Campbell and Carl A. Julien—192S
Structure of nickel chromite. E. Prince—68S
Use of graphite whiskers in a study of the atmosphere dependence of graphite friction. F. R. Rollins, Jr.—1454

Defects in Solids, Point Defects

Cross-section ratios of sensitizing centers in photoconductors. Richard H. Bube—1707
Deformation-produced point defects. Howard K. Birnbaum and Floyd R. Tuler—1403(L)
Dichroic color centers in calcium fluorophosphate. Peter D. Johnson—127(L)
Distribution coefficients of impurities in gallium antimonide. R. N. Hall and J. H. Racette—856
Effect of reactor fast neutrons on electron-hole recombination in germanium. A. Czachor and J. Piekoszewski—1837
Generation and distribution of dislocation by solute diffusion. S. Prussin—1876
Germanium saturated with gallium antimonide. J. O. McCaldin and D. B. Wittry—65
Influence of arsenic pressure on the doping of gallium arsenide with germanium. J. O. McCaldin and Roy Harada—557(L)
Influence of deformation and temperature on the cobalt gamma irradiation of sodium chloride. Evidence for electrical interaction between dislocations and point defects. Rohn Truell—1601
Interaction between vacancies and stacking fault ribbons in graphite. P. Delavignette and S. Amelinckx—554(L)

Defects in Solids, Point Defects (*continued*)
Interrelation of electronic properties and defect equilibria in PbTe. E. Miller, K. Komarek, and I. Cadoff—2457
Monotonic trap distributions. Richard H. Bube—1621(L)
On additivity of imperfections as means for domain nucleation. A. Aharoni—245S
Paramagnetic resonance of defects introduced near the surface of solids by mechanical damage. G. W. Walters and T. L. Estle—1854
Precipitation sites in aluminum alloys. G. R. Frank, Jr., D. L. Robinson, and G. Thomas—1763
Presence of carbon in gallium phosphide crystals. C. J. Frosch, M. Gershenzon, and L. Derick—2060(L)
Properties of high-resistivity gallium arsenide compensated with diffused copper. Joseph Blanc, Richard H. Bube, and Harold E. MacDonald—1666
Recombination kinetics for thermally dissociated Li-B pairs in Si. E. M. Pell and F. S. Ham—1052
Solubility of oxygen in germanium. W. Kaiser and C. D. Thurmond—115
Stored energy in fuel-bearing graphites. A. H. Willis, J. M. Baugnet, and R. C. De Buekelaer—1622(L)

Defects in Solids, Dislocations and Stacking Faults
Antimony edge dislocations in InSb. H. C. Gatos, M. C. Finn, and M. C. Lavine—1174(L)
Birefringence due to dislocations in glide bands of rocksalt single crystals. S. Mendelson—1999
Charged dislocations in ionic crystals. F. Rueda and W. Dekeyser—1799(L)
Concerning dislocations in glass. W. B. Hillig and R. J. Charles—123(L)
Cross slip and cross climb of dislocations induced by a locked dislocation. James C. M. Li—593
Defect mechanisms in a noncrystalline solid. W. C. Levengood—2525
Dislocation contributions to the modulus and damping in copper at megacycle frequencies. G. A. Alers and D. O. Thompson—283
Dislocation density and flow stress of sodium chloride. W. in der Schmitten and P. Hassen—1790
Dislocation etch pit formation in sodium chloride. S. Mendelson—1579
Dislocation etch pits on bismuth telluride crystals. Iwao Teramoto and Shigetoshi Takayanagi—119(L)
Dislocation etch pits on the basal plane of zinc crystals. H. S. Rosenbaum and M. M. Saffren—1856
Dislocation etching solution for potassium chloride and other alkali halides. J. S. Cook—2492(L)
Dislocation relaxation phenomena in oxide crystals. Roger Chang—1127
Dislocation-free aluminum crystals. S. Howe and C. Elbaum—742(L)
Dislocation interaction in bcc stainless steel. B. R. Banerjee, J. M. Capenos, J. J. Hauser, and J. P. Hirth—556(L)
Dislocations and stacking faults in aluminum nitride. P. Delavignette, H. B. Kirkpatrick, and S. Amelinckx—1098
Dislocations in silicon carbide. S. Amelinckx, G. Strumane, and W. W. Webb—1182(E)
Effects of transition metal solutes on the electrical resistivity of copper and gold between 4° and 1200°K. C. A. Domenicali and E. L. Christenson—2450
Electron microscope observations of dislocations in talc. S. Amelinckx and P. Delavignette—341
Enantiomorphous character of etch pits in telliurium. J. S. Blakemore and K. C. Normura—745(L)
Energy of a crossed grid of screw dislocations. James C. M. Li—1873
Etch pits at dislocations in copper. F. W. Young, Jr.—192
Experimental study of the interrelation between the theory of dislocations in polycrystalline media and finite amplitude wave propagation in solids. James F. Bell—1982
Generation and distribution of dislocation by solute diffusion. S. Prussin—1876
Growth twins in indium antimonide. R. K. Mueller and R. L. Jacobson—550(L)
Growth twins in indium antimonide. R. K. Mueller and R. L. Jacobson—1406(E)
High-angle tilt boundary—a dislocation core model. James C. M. Li—525
Influence of deformation and temperature on the cobalt gamma irradiation of sodium chloride. Evidence for electrical interaction between dislocations and point defects. Rohn Truell—1601
Interaction between vacancies and stacking fault ribbons in graphite. P. Delavignette and S. Amelinckx—554(L)
Modification of the Koehler-Granato-Lücke dislocation damping theory. J. C. Swartz and J. Weertman—1860
Nonbasal glide in dislocation-free cadmium crystals. I. The $(10\bar{1}1)$ $[1\bar{2}10]$ system. P. B. Price—1746
Nonbasal glide in dislocation-free cadmium crystals. II. The $(11\bar{2}2)$ $[\bar{1}123]$ system. P. B. Price—1750
On dislocation interactions in the fcc lattice. J. P. Hirth—700
On the mechanical and thermal stability of low-angle boundaries in zinc single crystals. Sigmund Weissmann, Makoto Hirabayashi, and Hiroshi Fujita—1156
Perfection of the lattice of dislocation-free silicon, studied by the lattice-constant and density method. M. E. Straumanis, P. Borgeaud, and W. J. James—1382
Polygonization in bent zinc crystals. P. P. Sinha and Paul A. Beck—1222
Recombination of excess carriers at twin structures in germanium. J. P. McKelvey—442
Precipitation of helium along dislocations in aluminum. G. T. Murray—1045
Reduction of cohesion in ionic crystals by dislocations. John J. Gilman—738(L)
Relative polygonization rates in copper and copper-zinc alloys. W. E. Heitmann and R. W. Balluffi—963(L)
Single and double pile-up dislocations in MgO crystals. Y. T. Chou and R. W. Whitmore—1920
Stacking fault probability of noble metal-zinc alloys. L. F. Vassamillet—778
Temperature dependence of rolling textures in high-purity silver. Hsun Hu and R. S. Cline—760
Texture transition in high-purity silver and its correlation with stacking fault frequency. Hsun Hu, R. S. Cline, and S. R. Goodman—1392
Variant in technique for A. R. Lang's x-ray diffraction topography. Henry A. Carlson and H. A. Richard Wegener—125(L)
Voids in resolidified drops in molten metal. J. C. Kelly—1797(L)
X-ray measurement of stacking fault widths in fcc metals. B. E. Warren—2428

Dielectrics and Dielectric Properties (see also Ferroelectricity)
Dielectric loss in poly-(hexamethylene adipamide) and poly-(hexamethylene sebacamide) at low temperatures. M. N. Stein, R. G. Lauttman, J. A. Sauer, and A. E. Woodward—2352
Dielectric properties and side-chain crystallinity of polyvinyl stearate. Martin G. Broadhurst, Edwin R. Fitzgerald, and Anthony J. Bur—972
Experimental investigation of the Sumoto effect. William F. Pickard—1888

Forces in dielectric fluids. James D. Horgan and David L. Edwards—1784(L)
Increase in dielectric constant during switching in lithium selenite and triglycine sulfate. Ennio Fatuzzo—1571
Measurement of the electrical conductivity and dielectric constant without contacting electrodes. Tomoya Ogawa —583
Properties of polyvinylidene fluoride. I. Dielectric measurements. Tunis Wentink, Jr.—1063

Diffraction, Electron

"Anomalous" electron double diffraction. O. Hasse and R. D. Hiedenreich—1840
Forbidden reflections in electron diffraction patterns of evaporated thin films. Richard W. Vook—2474
(110) nickel surface. L. H. Germer, A. U. MacRae, and C. D. Hartman—2432
Magnetic anisotropy of cobalt as revealed by electron diffraction. S. Yamaguchi—961(L)

Diffraction, Neutron

Neutron diffraction by helical spin structures. W. C. Koehler—20S
Neutron diffraction investigation of magnetic ordering in dysprosium. M. K. Wilkinson, W. C. Koehler, E. O. Wollan, and J. W. Cable—48S
Neutron diffraction study of metallic erbium. J. W. Cable, E. O. Wollan, W. C. Koehler, and M. W. Wilkinson—49S

Diffraction, X-ray

Determination of crystallite size distributions from x-ray line broadening. Arthur Bienenstock—187
Double Bragg x-ray scattering studies of polycrystalline metals. R. L. Wild, W. T. Ogier, L. M. Richards, and J. C. Nickel—520
Imaginary part of x-ray scattering factor for germanium. Comparison of theory and experiment. Boris W. Batterman—998
Lattice parameter determinations with an x-ray spectrogoniometer by the Debye-Scherrer method and the effect of specimen condition. Henry M. Otte—1536
Lattice parameter studies of impurity effects on plastic properties of lithium fluoride. W. L. Phillips, Jr.—751(L)
Low-angle x-ray diffraction of crystalline nonoriented polyethylene and its relation to crystallization mechanisms. L. Mandelkern, A. S. Posner, A. F. Diorio, and D. E. Roberts—1509
Mosaic size in lead from x-ray measurements. Yosio Hiki and Ryukiti R. Hasiguti—1647
Perfection of the lattice of dislocation-free silicon, studied by the lattice-constant and density method. M. E. Straumanis, P. Borgeaud, and W. J. James—1382
Small-angle scattering in gold-nickel alloys. G. Nagorsen and B. L. Averbach—688
Variant in technique for A. R. Lang's x-ray diffraction topography. Henry A. Carlson and H. A. Richard Wegener—125(L)
X-ray diffraction study of interdiffusion in Cu-Ni powder compacts. Bertina Fisher and P. S. Rudman—1604
X-ray measurement of stacking fault widths in fcc metals. B. E. Warren—2428
X-ray polarizer. H. Cole, F. W. Chambers, and C. G. Wood—1942

Diffusion

Analysis of photojunctions formed by diffusing copper into insulating cadmium sulfide crystals. Robert R. Bockemuehl, James E. Kauppila, and David S. Eddy—1324
Analytic solution of the double-diffusion problem. K. C. Nomura—1167(L)
An approximate solution of Fick's diffusion equation. T. Tsang—1518
Diffusion in a ferromagnetic alloy. James Stanley and Charles Wert—267
Diffusion in a liquid indium-tin alloy at the eutectic concentration. A. Paoletti and M. Vicentini—22
Diffusion in a liquid indium-tin alloy at several concentrations. A. Paoletti and M. Vicentini-Missoni—559
Diffusion reactions in the aging of 4-79 molybdenum Permalloy. E. M. Tolman—360S
Diffusion of tin in gallium arsenide. B. Goldstein and H. Keller—1180(L)
Effect of torsional deformation on self-diffusion in silver. C. H. Lee and R. Maddin—1846
Experimental study of intermetallic diffusion in large temperature gradients. C. J. Meechan—945
Field-enhanced donor diffusion in degenerate semiconductor layers. W. Shockley—1402(L)
Generation and distribution of dislocation by solute diffusion. S. Prussin—1876
Grain-boundary diffusion. A. E. Austin and N. A. Richard —1462
Helium diffusion through glass. V. O. Altemose—1309
Mobility of radiation-induced defects in germanium. P. Baruch—653
Polarization and diffusion in a silicate glass. R. J. Charles —1115
Radiation enhancement of bulk diffusion in 10% Zn—90% Cu by 3-kev Ne^+ ion bombardment. R. A. Arndt and R. L. Hines—1913
Role of crystal structure in diffusion. I. Diffusion paths in closest-packed crystals. Leonid V. Azároff—1658
Role of crystal structure in diffusion. II. Activation energies for diffusion in closest-packed structures. Leonid V. Azároff—1663
Self-diffusion in silver during plastic deformation in torsion. J. B. Darby, Jr., C. T. Tomizuka, and R. W. Balluffi—840
Sintering crystalline solids. I. Intermediate and final state diffusion models. R. L. Coble—787
Sintering crystalline solids. II. Experimental test of diffusion models in powder compacts. R. L. Coble—793
X-ray diffraction study of interdiffusion in Cu-Ni powder compacts. Bertina Fisher and P. S. Ridman—1604

Elasticity and Anelasticity

Application of the three-parameter stress function to natural rubbers of widely different hardness. A. J. Carmichael and H. W. Holdaway—1724
Crack propagation in a strain-crystallizing elastomer. E. H. Andrews—452
Dislocation contributions to the modulus and damping in copper at megacycle frequencies. G. A. Alers and D. O. Thompson—283
Elastic constants of bismuth. Yakov Eckstein, A. W. Lawson, and Darrell H. Reneker—752(E)
Elastic constants of single crystals of the bcc transition elements V, Nb, and Ta. D. I. Bolef—100
Elastic constants of single-crystal YIG. A. E. Clark and R. E. Strakna—1172(L)
Elastic constants of TiC and TiB_2. J. J. Gilman and B. W. Roberts—1405(L)
Elastic modulus of amorphous nickel films. Stanka Jovanovic and Cyril Stanley Smith—121(L)
Experimental study of the interrelation between the theory of dislocations in polycrystalline media and finite amplitude wave propagation in solids. James F. Bell—1982
Influence of deformation and temperature on the cobalt gamma irradiation of sodium chloride. Evidence for electrical interaction between dislocations and point defects. Rohn Truell—1601

Elasticity and Anelasticity (*continued*)
Low-frequency measurements on the Bordoni internal friction peak in copper. D. H. Niblett—895
Low-temperature internal friction peaks in single crystals of NaCl and LiF. Anthony Taylor—1799(L)
Modification of the Koehler-Granato-Lucke dislocation damping theory. J. C. Swartz and J. Weertman—1860
On the internal friction of cold-worked and quenched martensitic iron and steel. T. Mura, I. Tamura, and J. O. Brittain—92
On the interpretation of internal friction experiments on strain aging of iron. J. C. Swartz—2048(L)
On the measurement of C_{13} in rhombohedral crystals. L. J. Teutonico—119(L)
Phenomenological elastomechanical behavior of rubbers over wide ranges of strain. A. J. Carmichael and H. W. Holdaway—159
Residual thermoelastic stresses in bonded silicon wafers. T. D. Riney—454
Scattering of plane waves by a rigid ribbon in a solid. K. Harumi—1488
Semiconducting stress transducers utilizing the transverse and shear piezoresistance effects. W. G. Pfann and R. N. Thurston—2008
Study of the Bordoni internal friction peaks in copper. Victor K. Paré—332
Theory and application of a superposition model of internal friction and creep. J. Ross Macdonald—2385
Thermoelastic equations and Grueneisen's relation. A. M. Freudenthal—1801(L)
Third-order elastic moduli of germanium. T. Bateman, W. P. Mason, and H. J. McSkimin—928
Ultrasonic attenuation of longitudinal waves in plastics. Michel Auberger and John S. Rinehart—219
Ultrasonic detection of changes in the elastic properties of a 70–30 iron-nickel alloy upon heat treatment. Emmanuel P. Papadakis and Everett L. Reed—682

Electrical Circuits and Networks
Compact uhf isolator. D. Bruce Swartz—319S
Energy interchange between cyclotron and synchronous waves in quadrupolar pump fields. E. I. Gordon and A. Ashkin—1137
Field solution for a thin-films superconducting strip transmission line. James C. Swihart—461
Generation of microwave electromagnetic radiation in magnetic materials. J. H. Rowen, F. C. Eggers, and W. Strauss—313S
Impedance of a top-loaded antenna of arbitrary length over a circular grounded screen. James R. Wait and Walter J. Surtees—557(L)
Open circuit voltages in the cesium diode. Fred N. Huffman—1927
Perturbation techniques for miniaturized coaxial *Y*-junction circulators. John Clark—323S
Phase shift studies in ferrite-dielectric loaded coaxial lines at 2200 Mc. J. J. Rowley—321S
Preliminary operation of a four-sector racetrack microtron. Eric Brannen and H. Froelich—1179(L)
Seesaw maser operation. P. A. Forrester and W. B. Mims—317

Electrical Conductivity (Galvanomagnetic Effects)
A graphical method for determination of mobility ratio in the semiconductors from Hall effect measurements only. Krzysztof Pigoń—2369
A method for measuring the conductivity in a high electron density plasma. K. B. Persson—2631
Angular dependence of magnetoresistance in HgSe. Theodore C. Harman—1800(L)
Anodic oxidation of germanium. T. Gabor—1361
Band structure and transport properties of some 3-5 compounds. H. Ehrenreich—2155
Band structure of the intermetallic semiconductors from pressure experiments. William Paul—2082
Conductivity of seeded atmospheric pressure plasmas. L. S. Frost—2029
Corbino disk. Milton Green—2047(L)
Corbino disk magnetoresistivity measurements on InSb. Milton Green—1286
Current flow across grain boundaries in *n*-type germanium. I. R. K. Mueller—635
Current flow across grain boundaries in *n*-type germanium. II. R. K. Mueller—640
Effects of transition metal solutes on the electrical resistivity of copper and gold between 4° and 1200°K. C. A. Comenicali and E. L. Christenson—2450
Electrical and optical properties of mercury selenide (HgSe). H. Gobrecht, U. Gerhardt, B. Peinemann, and A. Tausend—2246
Electrical and optical properties of the II–V compounds. W. J. Turner, A. S. Fischler, and W. E. Reese—2241
Electrical conduction and breakdown in high-pressure (0.25–300 mm) rare gases. R. Forman—1651
Electrical conductivity and thermoelectric effect in single-crystal TiC. Lewis E. Hollander, Jr.—996
Electrical conductivity in flame gases with large concentrations of potassium. G. J. Mullaney, P. H. Kydd, and N. R. Dibelius—668
Electrical conductivity of NaCl during high-temperature creep. R. W. Christy and W. E. Daniels, Jr.—1265
Electrical properties of lead telluride. Yasuo Kanai, Riro Nii, and Naozo Watanabe—2146
Electrical resistivity of chromium in the vicinity of the Néel temperature. M. J. Marcinkowski and H. A. Lipsitt—1238
Electrical resistivities of nickel-niobium solid solutions. Sigurds Arajs—97
Electron mobilities and tunneling currents in silicon. R. A. Logan, J. F. Gilbert, and F. A. Trumbore—131(L)
Energy band structure of gallium antimonide. W. M. Becker, A. K. Ramdas, and H. Y. Fan—2094
Energy dependence of radiation damage in tungsten. D. R. Muss and J. R. Townsend—189
Energy of spectrum and scattering of current carriers in gallium arsenide. D. N. Naseledov—2140
Galvanomagnetic properties of InSb. H. Weiss—2064
Galvanomagnetic effects in III–V compound semiconductors. A. C. Beer—2107
Heitler-London approach to electrical conductivity. Jiro Yamashita—2215
High-field conductivity in germanium and silicon at microwave frequencies. J. Zucker, V. J. Fowler, and E. M. Conwell—2606
Impurity band conduction and the problem of excess current in tunnel diodes. T. P. Brody—746(L)
Influence of conductivity gradients on galvanomagnetic effects in semiconductors. R. T. Bate and A. C. Beer—800
Influence of magnetoconductivity discontinuities on galvanomagnetic effects in indium antimonide. R. T. Bate, J. C. Bell, and A. C. Beer—806
Influence of tensor conductivity on current distribution in a MHD generator. H. Hurwitz, Jr., R. W. Kilb, and G. W. Sutton—205
Influence of the cathode surface on arc velocity. T. J. Lewis and P. E. Secker—54
Influence of the Hall effect upon the transverse magnetoresistance in indium antimonide. Charles A. Simmons—1970

Interrelation of electronic properties and defect equilibria in PbTe. E. Miller, K. Komarek, and I. Cadoff—2457
Investigations on silicon carbide. H. J. van Daal, C. A. A. J. Greebe, W. F. Knippenberg, and H. J. Vink—2225
Investigations on SnS. W. Albers, C. Haas, H. J. Vink, and J. D. Wasscher—2220
Magnetoresistive measurements on domain rotation and wall development in Ni-Fe alloy films. Forrest G. West —290S
Magnetoresistance and magnetic switching in permalloy films. R. L. Coren and H. J. Juretschke—292S
Majority carrier magnetosurface effect. Robert D. Larrabee—2019
Measurement of the electrical conductivity and dielectric constant without contacting electrodes. Tomoya Ogawa —583
Model for the electronic transport properties of mixed valency semiconductors. R. C. Miller, R. R. Heikes, and R. Mazelsky—2202
Negative resistance and hot electrons. I. Adawi—1101
Nonohmic behavior in near-stoichiometric rutile (TiO_2). E. H. Greener and D. H. Whitmore—1320
Observations on the striation of electrically exploded copper foils. Eugene C. Cnare—1043
Oscillatory magnetoresistance in the conduction band of PbTe. K. F. Cuff, M. R. Ellett, and C. D. Kuglin—2179
Polaron band model and its application to Ce-S semiconductors. J. Appel and S. W. Kurnick—2206
Properties of semi-insulating GaAs. C. H. Gooch, C. Hilsum, and B. R. Holeman—2069
Recent studies of bismuth telluride and its alloys. H. J. Goldsmid—2198
Recent studies on rutile (TiO_2). H. P. R. Frederikse—2211
Resistance heating in the arc cathode spot zone. J. A. Rich—1023
Righi-Leduc effect in mercuric selenide. Charles R. Whitsett—2257
Some electrical and optical properties of ZnSe. M. Aven, D. T. F. Marple, and B. Segall—2261
Some properties of HgSe-HgTe solid solutions. M. Rodot, H. Rodot, and R. Triboulet—2254
Some properties of *p-n* junctions in GaP. H. G. Grimmeiss and A. Rabenau—2123
Study of band structure of intermetallic compounds by pressure experiments. A. Sagar and R. C. Miller—2073
Theory of microplasma instability in silicon. R. J. McIntyre—983
Theory of the potential well produced by multipacting electrons. Part I. Very low pressure regime. R. L. Ingraham—2553
Transference number measurements for aluminum oxide. W. D. Kingery and G. E. Meiling—556(L)
Tunneling through thin insulating layers. J. C. Fisher and I. Giaever—172
Uniformity of electrical current flow in cylindrical semiconductor specimens with cylindrical metallic end caps. R. Simon, J. H. Cahn, and J. C. Bell—46

Electromagnetic Waves

Backward-wave microwave oscillations in a system composed of an electron beam and a hydrogen gas plasma. R. Targ and L. P. Levine—731
Backward waves in longitudinally magnetized ferrite rods. G. H. B. Thompson—2491(L)
Backward waves in longitudinally magnetized ferrite rods. A. W. Trivelpiece, A. Ignatius, and P. C. Holscher—259
Calculation of x-ray intensities from electron probe specimens. L. S. Birks—387
Determination of field strength for field evaporation and ionization in the field ion microscope. Erwin W. Muller and Russell D. Young—2425
Effect of cobalt oxide in porous nickel ferrites at very high frequency. Harry F. Remde—384S
Electric breakdown strength of single and laminated films of vinyl chloride-acetate. Robert G. Greenler and Robert M. Kay—1252
Electromagnetic surface waves on a plane interface. B. A. Lengyel and K. M. Mitzner—1758
Energy interchange between cyclotron and synchronous waves in quadrupolar pump fields. E. I. Gordon and A. Ashkin—1137
Excitation and amplification of cyclotron waves and thermal orbits in the presence of space charge. R. Adler, A. Ashkin, and E. I. Gordon—672
Experimental confirmation of Lamb waves at megacycle frequencies. D. C. Worlton—967
Free carrier cyclotron resonance, Faraday rotation, and Voigt double refraction in compound semiconductors. E. D. Palik, S. Teitler, and R. F. Wallis—2132
Generalized coupled mode theory. M. C. Pease—1736
Generation of microwave electromagnetic radiation in magnetic materials. J. H. Rowen, F. G. Eggers, and W. Strauss—313S
Generation of millimeter waves by the electron beam of a microtron. E. Brannen, H. Froelich, and T. W. W. Stewart—964(E)
Harmonic generation and frequency mixing in ferromagnetic insulators. R. L. Jepsen—2627
Impedance of a top-loaded antenna of arbitrary length over a circular grounded screen. James R. Wait and Walter J. Surtees—557(L)
Microwave analog to the scattering of light by nonspherical particles. J. Mayo Greenberg, Norman E. Pedersen, and Jeanne C. Pedersen—233
Microwave harmonic generation by ferrimagnetic crystals. D. D. Douthett, I. Kaufman, and A. S. Risley—1905
Microwave measurements of the radiation temperature of plasmas. G. Bekefi and Sanborn C. Brown—25
Microwave propagation through a magnetoplasma. R. L. Phillips, R. G. DeLosh, and D. E. White—551(L)
Microwave propagation through a magnetoplasma. R. L. Phillips, R. G. DeLosh, and W. E. White—1406(E)
Momentum and energy of waves. J. R. Pierce—2580
Parametric coupling between the transverse waves on *O*- and *M*-type beams. J. W. Klüver—1111
Propagation in periodic electron beams. W. M. Mueller —1349
Proposed fiber cavities for optical masers. E. Snitzer—36
Radiation from a modulated electron beam with a plasma background. Philip Parzen—2484
Reflection and transmission of electromagnetic waves at electron density gradients. Frank A. Albini and Robert G. Jahn—75
Reflection of electromagnetic waves at electron density ramps. Leonard S. Taylor—1796(L)
Reflection of an electron beam from high-frequency fields. R. B. Hall and Sanborn C. Brown—1835
Theory of quantum oscillators in a multimode cavity. W. G. Wagner and G. Birnbaum—1185

Electrostatic Fields (see also Space Charge)

Charged cylindrical tube. T. R. Ferguson and R. H. Duncan—1385
Determination of field strength for field evaporation and ionization in the field ion microscope. Erwin W. Muller and Russell D. Young—2425
Discharge photocells for the detection of resonance radiation. W. E. Bell and A. L. Bloom—906

Electrostatic Fields (*continued*)
Electric strength of rutile single crystals. D. A. Powers and I. J. T. Johansen—1083
Experimental evidence for the existence of two distinct field emission characteristics from silicon emitters. R. L. Perry—128(L)
Experimental investigation of the Sumoto effect. William F. Pickard—1888
Experimental study of arc stability. II. An investigation of mercury arc stability. G. A. Farrall and G. H. Reiling —1528
Fields in cavity-excited accelerators. E. G. Cristal and J. Van Bladel—1715
Forces in dielectric fluids. James D. Horgan and David L. Edwards—1784(L)
Formation of liquid jets in nonuniform electric fields. Herbert A. Pohl—1784(L)
Influence of the cathode surface on arc velocity. T. J. Lewis and P. E. Secker—54
Nanosecond triggering of air gaps with intense ultraviolet light. Terry F. Godlove—1589
On the microscopic analysis of the conducting electromechanical solid with application to cylinders subjected to axial electric fields. R. C. Geldmacher—143
On the question of ball lightning. Paul A. Silberg—30

Electron and Ion Emission
Bismuth-silver-oxygen-cesium photocathode. A. H. Sommer and W. E. Spicer—1036
Effects of monolayer adsorption and bombardment damage or Auger Electron ejection from germanium. Homer D. Hagstrum—1015
Effect of temperature on the emission of electrons from abraded surfaces of beryllium, calcium, aluminum, and magnesium. T. C. Ku and W. T. Pimbley—124(L)
Effect of temperature on the exoemission of electrons from abraded aluminum surfaces. W. T. Pimbley and E. E. Francis—1729
Electron bunching in the multipacting mechanism of high-frequency discharge. Albert J. Hatch—1086
Electron emission from reverse-biased *p-n* junctions in SiC. Lyle Patrick—2047(L)
Electron trajectories in a nonuniform axially symmetric magnetic field. D. A. Dunn and R. E. Holaday—1612
Electronic and ionic current at the cathode of a hollow-cathode discharge. V. K. Rohatgi—1173(L)
Emission fluctuations of tungsten-based barium dispenser cathodes. I. Brodie—2039
Etch effects from oblique-incidence ion bombardment. G. D. Magnuson, B. B. Meckel, and P. A. Harkins—369
Experimental evidence for the existence of two distinct field emission characteristics from silicon emitters. R. L. Perry—128(L)
Mass spectrographic analysis of insulators using a vacuum spark positive ion source. A. J. Ahearn—1195
Mercury ion beam sputtering of metals at energies 4–15 kev. G. K. Wehner and D. Rosenberg—887
On the thermionic properties of ZrC, UC, and ZrC·UC mixture. W. E. Danforth and Albert J. Williams, III —1181(L)
Operation of tunnel-emission devices. C. A. Mead—646
Sputtering of vitreous silica by 20- to 60-kev Xe^+ ions. R. L. Hines and R. Wallor—202
Sputtering yields of metals for Ar^+ and Ne^+ ions with energies from 50–60 ev. Nils Laegreid and G. K. Wehner—365
Temperature-dependent bismuth-cesium photosurfaces. R. J. Zollweg and C. R. Taylor—1316
Thermionic and photoelectric emission from magnesium oxide. James R. Stevenson and Eugene B. Hensley—166
Thermionic emission constants and their interpretation. Eugene B. Hensley—301
Thermionic emission from a tantalum crystal in cesium or rubidium vapor. H. F. Webster—1802(L)
Thermionic emission from spherical metallic particles. M. S. Sodha—2059(L)
Thermionic emission of UC-Nb. R. H. Abrams, Jr., and F. E. Jamerson—1783(L)
Thermionic properties of HfC. John H. Ingold—2651(L)
Tunneling through thin insulating layers. J. C. Fisher and I. Giaever—172
Use of monomolecular layers in evaporated-film tunneling devices. J. L. Miles and H. O. McMahon—1176(L)

Electron and Ion Optics
Drift velocity of a charged particle in an inhomogeneous magnetic field. James Hurley—2368
Electron-emission microscope and velocity distribution studies on silicon carbide *p-n* junction emitters. P. H. Gleichauf and V. Ozarow—549(L)
Operation of the field ion microscope with a dynamic gas supply. B. J. Waclawski and E. W. Müller—1472
Study of Li-O interaction in Si by ion drift. E. M. Pell—1048

Electron Beams
Back scattering of electrons. G. D. Archard—1505
Backward-wave microwave oscillations in a system composed of an electron beam and a hydrogen gas plasma. R. Targ and L. P. Levine—731
Calculation of x-ray intensities from electron probe specimens. L. S. Birks—387
Coupled mode theory of electron-beam parametric amplification. R. W. Gould and C. C. Johnson—248
Dissociation of adsorbed CO by slow electrons. George E. Moore—1241
Electron beam excitation of a Fabry-Perot interferometer. Murray D. Sirkis, Robert J. Strain, and William E. Kunz—2055(L)
Electron interferometer studies of iron whiskers. H. A. Fowler, L. Marton, J. Arol Simpson, and J. A. Suddeth —1153
Energy interchange between cyclotron and synchronous waves in quadrupolar pump fields. E. I. Gordon and A. Ashkin—1137
Experimental study of anomalous electron stream behavior. M. H. Miller and W. G. Dow—274
Generation of millimeter waves by the electron beam of a microtron. E. Brannen, H. Froelich, and T. W. W. Stewart—964(E)
Interaction of slow electrons with insulating crystals. I. Absorption coefficient for cleaved alkali halides; experimental techniques. C. J. Cook and William J. Fredericks—860
On E. L. Chu's definition of small-signal rf power of electron beams. D. L. Bobroff, H. A. Haus, and J. W. Kluver—749(L)
Parametric coupling between the transverse waves on *O*- and *M*-type beams. J. W. Klüver—1111
Propagation in periodic electron beams. W. M. Mueller—1349
Quasi-Brillouin electron streams. M. H. Miller—1791(L)
Radiation from a modulated electron beam with a plasma background. Philip Parzen—2484
Reflection of an electron beam from high-frequency fields. R. B. Hall and Sanborn C. Brown—1835

Electron Microscopy
Direct observation in the electron microscope of oxide layers on aluminum. K. Thomas and M. W. Roberts—70
Electron-emission microscope and velocity distribution studies on silicon carbide *p-n* junction emitters. P. H. Gleichauf and V. Ozarow—549(L)

Electron microscope observation of dislocations in talc. S. Amelinckx and P. Delavignette—341
Electron microscope study of radiation damage in graphite. W. Bollmann—869
Nonbasal glide in dislocation-free cadmium crystals. I. The $(10\bar{1}1)$ $[1\bar{2}10]$ system. P. B. Price—1746
Nonbasal glide in dislocation-free cadmium crystals. II. The $(\bar{1}122)$ $[\bar{1}123]$ system. P. B. Price—1750
Single-crystal tin films. Richard W. Vook—1557
Transmission electron microscope observations of magnetic domain walls. J. T. Michalak and R. C. Glenn—1261
Transmission electron microscopy of Alnico. V. J. M. Capenos and Bani R. Banerjee—323(L)

Electron Paramagnetic Resonance

Chromium ion pair interactions in the paramagnetic resonance spectrum of ruby. H. Statz, L. Rimai, M. J. Weber, G. A. deMars, and G. F. Koster—218S
Cross-doping agents for rutile masers. P. F. Chester—866
Electron spin resonance in powders. Gerald Burns—2048(L)
Electron spin resonance in neutron-irradiated quartz. Robert H. Silsbee—1459
Electron spin resonance in semiconducting rutile. P. F. Chester—2233
Paramagnetic resonance of defects introduced near the surface of solids by mechanical damage. G. K. Walters and T. L. Estle—1854
Paramagnetic resonance of S state ions in metals. Martin Peter—338S
Paramagnetic resonance measurements of exchange interactions. J. Owen—213S
Zero-field splitting of the Cr^{3+} ground state in YGa and YAl garnet. J. E. Carson and R. L. White—1787(L)

Electron Tubes

Emission fluctuations of tungsten-based barium dispenser cathodes. I. Brodie—2039

Energy Conversion

Alternating current magnetohydrodynamic generator. P. R. Smy—1946
Application of ferroelectricity to energy conversion processes. W. H. Clingman and R. G. Moore, Jr.—675
Available power from a nonideal thermal source. Paul Penfield, Jr.—1794(L)
Calculation of the maximum efficiency of the thermionic converter. John H. Ingold—769
Calculations of the thermoelectric parameters and the maximum figure of merit for acoustical scattering. Louis R. Testardi—1978
Detailed balance limit of efficiency of p-n junction solar cells. William Shockley and Hans J. Queisser—510
End effect losses in dc magnetohydrodynamic generators. Roland A. Boucher and Dennis B. Ames—755
Influence of tensor conductivity on current distribution in a MHD generator. H. Hurwitz, Jr., R. W. Kilb, and G. W. Sutton—205
Interpretation of experimental characteristics of cesium thermionic converters. E. N. Carabateas, S. D. Pezaris, and G. N. Hatsopoulos—352
Low-frequency oscillations in a filamentary cathode cesium diode converter. K. P. Luke and F. E. Jamerson—321(L)
On the thermionic properties of ZrC, UC, and ZrC·UC mixture. W. E. Danforth and Albert J. Williams, III—1181(L)
Open circuit voltages in the cesium diode. Fred N. Huffman—1927
Optimization of emission-limited thermionic generators. Alfred Schock—1564
Oscillations and saturation current measurements in thermionic conversion cells. R. J. Zollweg and Milton Gottlieb—890
Paramagnetic maser oscillator analysis. S. Wang and J. R. Singer—1371
Peltier coefficient at high current levels. John R. Reitz—1623(L)
Relaxation oscillations in a plasma diode. J. M. Rocard and G. W. Paxton—1171(L)
Response of a thermocouple circuit to nonsteady currents. Thomas T. Arai and John R. Madigan—609
Shock-wave compression of iron and bismuth. D. S. Hughes, L. E. Gourley, and Mary F. Gourley—624
Spectral response of solar cells. Brian Dale and F. P. Smith—1377
Theoretical bound on the thermoelectric figure of merit from irreversible thermodynamics. Howard Littmann and Burton Davidson—217
Thermionic emission from a tantalum crystal in cesium or rubidium vapor. H. F. Webster—1802(L)
Thermionic emission of UC-Nb. R. H. Abrams, Jr., and F. E. Jamerson—1783(L)
Thermionic properties of HfC. John H. Ingold—2651(L)
Thermodynamics of thermally regenerated fuel cells. J. B. Friauf—616
Transient effects in Peltier coolers. A. D. Reich, T. Arai, and J. R. Madigan—2493(L)
Transient response of a thermocouple circuit under steady currents. Allen D. Reich and John R. Madigan—294
Zero-, first-, and second-order theories of a general thermocouple. A. H. Boerdijk—1584

Experimental Techniques and Instruments

Calculation of x-ray intensities from electron probe specimens. L. S. Birks—387
Development and preliminary testing of a device for electrostatic classification of submicron airborne particles. G. Langer and J. L. Radnik—955
Discharge photocells for the detection of resonance radiation. W. E. Bell and A. L. Bloom—906
Electron beam excitation of a Fabry-Perot interferometer. Murray D. Sirkis, Robert J. Strain, and William E. Kunz—2055(L)
Electron interferometer studies of iron whiskers. H. A. Fowler, L. Marton, J. Arol Simpson, and J. A. Suddeth—1153
Equilibrium atmosphere schedules for the cooling of ferrites. John M. Blank—378S
Far infrared and microwave detector. D. W. Goodwin and R. H. Jones—2056(L)
Flash method of determining thermal diffusivity, heat capacity, and thermal conductivity. W. J. Parker, R. J. Jenkins, C. P. Butler and G. L. Abbott—1679
Hot-cathode magnetron ionization gauge for the measurement of ultrahigh vacua. J. M. Lafferty—424
Hydromagnet: a self-generating liquid conductor electromagnet. Henry H. Kolm and Osman K. Mawardi—1296
Induction-coupled plasma torch. Thomas B. Reed—821
Interaction of slow electrons with insulating crystals. I. Absorption coefficient for cleaved alkali halides; experimental techniques. C. J. Cook and William J. Fredericks—860
Interference method for measuring the thickness of epitaxially grown films. W. G. Spitzer and M. Tanenbaum—744(L)
Measurement of minority carrier lifetime in SiC by a novel electroluminescent method. G. G. Harman and R. L. Raybold—1168(L)
On the theoretical limitation of a radio telescope in determining the sky temperature distribution. Y. T. Lo—2052(L)

Experimental Techniques and Instruments (*continued*)
Particle interaction in magnetic recording tapes. J. G. Woodward and E. Della Torre—126(L)
Proposed method of measuring thermal diffusivity at high temperatures. Robert D. Cowan—1363
Pulse method for the measurement of thermal diffusivity of metals. Edwin L. Woisard—40
Radio-frequency technique for pulling oxide crystals without employing a crucible susceptor. F. R. Monforte, F. W. Swanekamp, and L. G. Van Uitert—959(L)
Semiconducting stress transducers utilizing the transverse and shear piexoresistance effects. W. G. Pfann and R. N. Thurston—2008
Spherical lenses for infrared and microwaves. G. Toraldo de Francia—2051(L)
Stability of pressure-supported molten zones in horizontal sheets. H. P. Kramer, B. P. Bogert, and D. W. Hagelbarger—764
Superconductor-transition switching time measurements using a superconductive radio-frequency mixer. Donald L. Feucht and James B. Woodford, Jr.—1882
Useful technique for growing large, single-crystal YIG. Don Barry and Roy W. Roberts—1405(L)
X-ray polarizer. H. Cole, F. W. Chambers, and C. G. Wood—1942

Explosions and Explosives
Behavior of exploding gold wires. T. J. Tucker—1894
Electrically imploded-exploded aluminum tube. Eugene C. Cnare—1275
Growth of explosion in electrically initiated RDX. G. M. Muller, D. B. Moore, and D. Bernstein—1065
Initiation of a low-density PETN pressing by a plane shock wave. G. E. Seay and L. B. Seely, Jr.—1092
Observations on the striation of electrically exploded copper foils. Eugene C. Cnare—1043
On a problem in the thermal stability of explosives. Mahinder P. Murgai, James O. Milmoe, James P. Kottenstette, and Fred L. Smith—324(L)
Production of high ion densities in helium by means of high explosives. G. E. Seay, L. B. Seely, Jr., and R. G. Fowler—2439
Transparency of glass and certain plastics under shock attack. H. Dean Mallory and William S. McEwan—2421

Ferroelectricity (see also Dielectrics)
Application of ferroelectricity to energy conversion processes. W. H. Clingman and R. G. Moore, Jr.—675
Bismuth titanate. A ferroelectric. L. G. Van Uitert and L. Egerton—959(L)
Ferromagnetic resonance in piezoelectric $Ga_{2-x}Fe_xO_3$. A. Dymanus and I. P. Kaminow—144S
Increase in dielectric constant during switching in lithium selenite and triglycine sulfate. Ennio Fatuzzo—1571
Models for switching in ferroelectrics. David J. White—1169(L)
Motion of 180° domain walls in $BaTiO_3$ under the application of a train of voltage pulses. Robert C. Miller and Albert Savage—714
Multiple shock wave structures in polycrystalline ferroelectrics. C. E. Reynolds and G. E. Seay—1401(L)
On the microscopic analysis of the conducting electromechanical solid with application to cylinders subjected to axial electric fields. R. C. Geldmacher—143
Piezoelectric behavior of impacted quartz. R. A. Graham—555(L)
Piezoelectricity of quartz for finite strain. S. Machlup and M. E. Christopher—1387
Piezoelectric scattering and phonon drag in ZnO and CdS. A. R. Hutson—2287
Stress dependence of the piezoresistance effect. Donald Long—2050(L)
Surface layer in $BaTiO_3$ single crystals. Ennio Fatuzzo and Walter J. Merz—1685
Surface layers on barium titanate single crystals above the Curie point. H. Schlosser and M. E. Drougard—1227
The motion of c domain centers in $BaTiO_3$. G. L. Link—2566
Variation of permittivity with electric field in perovskite-like ferroelectrics. Howard Diamond—909

Ferromagnetic Materials and Ferrites (see also Ferromagnetic Resonance, Magnetic Domain Wall Behavior, Magnetic Devices, Magnetization)
Angular variation of the magnetic properties of partially aligned γ-Fe_2O_3 particles. G. Bate—239S
Anisotropic Curie temperature. Earl R. Callen—221S
Anisotropy and magnetostriction in magnetic oxides. J. C. Slonczewski—253S
Anisotropy in permalloy films evaporated at grazing incidence. M. S. Cohen—87S
Anisotropy in nickel-iron films. D. O. Smith—70S
Anisotropy of YIG calculated from crystal field parameters Fe^{3+} in yttrium gallium garnet. S. Geschwind—263S
Anisotropy rotation in thin permalloy films at room temperature. T. Matcovich, E. Korostoff, and A. Schmeckenbecher—93S
Annealing behavior and temperature dependence of the magnetic properties of thin Permalloy films. Armin Segmüller—89S
Annealing of oblique-incidence permalloy films. G. P. Weiss and D. O. Smith—85S
Backward waves in longitudinally magnetized ferrite rods. G. H. B. Thompson—2491(L)
Backward waves in longitudinally magnetized ferrite rods. A. W. Trivelpiece, A. Ignatius, and P. C. Holscher—259
Behavior of ferro- or ferrimagnetic very fine particles. C. J. Lin—233S
Cation distributions in magnesium-nickel ferrites. C. J. Kriessman and S. E. Harrison—392S
Cobalt ferrite single crystals. A. Ferretti, R. J. Arnott, E. Delaney, and A. Wold—905
Comment on the saturation magnetization of neodymium yttrium iron garnet. Robert L. White—1178(L)
Crystal lattice investigation of the permanent magnet precipitate in various Alnico materials. K. J. Kronenberg—196S
Cube texture in ultrathin molybdenum Permalloy tape. P. K. Koh—358S
Curie temperature of some garnets by the differential thermal analysis technique. A. Aharoni, E. H. Frei, Z. Scheidlinger, and M. Schieber—1851
Determination of the directions of magnetization in polycrystalline ferrites. D. R. Callaby—298S
Diffusion in a ferromagnetic alloy. James Stanley and Charles Wert—267
Diffusion reactions in the aging of 4-79 molybdenum Permalloy. E. M. Tolman—360S
Domain structures in iron whiskers as observed by the Kerr method. C. A. Fowler, Jr., E. M. Fryer, and D. Treves—296S
Domain wall mobility in single-crystal yttrium iron garnet. F. B. Hagedorn and E. M. Gyorgy—282S
Effect of cobalt oxide in porous nickel ferrites at very high frequency. Harry F. Remde—384S
Effect of frequency modulation on subsidiary resonance in ferrites. J. F. Ollom and H. L. Goldstein—2059(L)
Effect of indium substitution in yttrium iron garnet: high permeability garnets. J. Richard Cunningham, Jr., and Elmer E. Anderson—388S

Effect of magnetic clusters on the specific heat of Ni-Cu and Fe-V alloys. K. Schröder—800
Elastic constants of single-crystal YIG. A. E. Clark and R. E. Strakna—1172(L)
Elongated iron-cobalt: ferrite, a new, lightweight, permanent magnet material. R. B. Falk and G. D. Hooper —190S
Epitaxial growth and magnetic properties of single-crystal films of iron, nickel, and Permalloy. Soshin Chikazumi —81S
Equilibrium atmosphere schedules for the cooling of ferrites. John M. Blank—378S
Exchange inversion in $Mn_{2-x}Cr_xSb$. W. H. Cloud, T. A. Bither, and T. J. Swoboda—55S
Exchange anisotropy in oxidized iron-cobalt particles. F. J. Darnell—186S
Experimental g' and g values of Fe, Co, Ni, and their alloys. A. J. P. Meyer, and G. Asch—330S
Ferrimagnetic resonance and torque measurements on ytterbium-substituted yttrium iron garnet. R. W. Teale, R. F. Pearson, and M. J. Hight—150S
Ferrimagnetic resonance in single crystals of cobalt-substituted manganese ferrite. R. W. Teale and M. J. Hight—140S
Ferrimagnetic resonance in a single-crystal disk of yttrium iron garnet. Archibald W. Smith and Akira Watanabe —155S
Ferrimagnetic resonance of single-crystal barium ferrite in the millimeter wave region. Franklin F. Y. Wang, Koryu Ishii, and James B. Y. Tsui—1621(L)
Ferrite system for application at lower microwave frequencies. Clinton F. Jefferson and Russell G. West —390S
Ferrite thin films. Henry P. Lemaire and William J. Croft —46S
Ferromagnetic alignment by antiferromagnetic exchange interaction. Note on the magnetic behavior of neodymium garnet. W. P. Wolf—742(L)
Ferromagnetic nucleation sources on iron whiskers. R. E. De Blois—1561
Ferromagnetic phase of Mn-Al. Robert B. Campbell and Carl A. Julien—346S
Ferromagnetic relaxation at low microwave frequencies. J. J. Green and E. Schlömann—168S
Ferromagnetic resonance in piezoelectric $Ga_{2-x}Fe_xO_3$. A. Dymanus and I. P. Kaminow—144S
Ferromagnetic resonance due to magnetic fields generated by displacement currents in ferrites. Isidore Bady and Gilbert McCall—146S
Ferromagnetic resonance linewidth in cobalt-substituted ferrites. C. Warren Haas and Herbert B. Callen—157S
Fine-grained ferrites. I. Nickel ferrite. W. W. Malinofsky and R. W. Babbitt—237S
Fine-wire ferrite limiter. Ernest Stern—315S
First magnetocrystalline anisotropy constants of some iron-silicon alloys. Sigurds Arajs, Henry Chessin, and D. S. Miller—857
Flux distribution in ferrite cores under various modes of partial switching. R. H. James, W. M. Overn, and C. W. Lundberg—38S
Free oscillations of the magnetization permalloy films. Peter Wolf—95S
Frequency dependence of ultrasonic wave attenuation in Armco iron and low-carbon steel. U. M. Martius and W. J. Bratina—280S
Generation of microwave electromagnetic radiation in magnetic materials. J. H. Rowen, F. G. Eggers, and W. Strauss—313S
Growth of single-crystal iron ferrites by the Czochralski method. F. H. Horn—900
Growth of yttrium iron garnet single crystals by the floating zone technique. L. L. Abernethy, T. H. Ramsey, Jr., and John W. Ross—376S
Harmonic generation and frequency mixing in ferromagnetic insulators. R. L. Jepsen—2627
High-power characteristics of low-magnetization garnets. J. H. Saunders and J. J. Green—161S
High-temperature magnetic lag in iron-nickel alloys. Dieter Gerstner and Eckart Kneller—364S
High-temperature stability of magnetic materials. Norman Pavlik—372S
Improved magnetic properties of high-purity iron-cobalt alloys containing 27–43% cobalt. Daniel S. Shull, Jr. —356S
Induced magnetic anisotropy created by magnetic or stress annealing of iron-aluminum alloys. H. J. Birkenbeil and R. W. Cahn—362S
Initial permeability characteristics of vanadium-doped manganese-zinc ferrites. Yūzō Shichijō, Noboru Tsuya, and Kōki Suzuki—386S
Losses in silicon iron at very low frequencies and high flux densities. Daniel A. Wycklendt and Robert M. Kay —368S
Low-temperature magnetic properties of some rare-earth garnet compounds. M. Ball, G. Garton, M. J. M. Leask, D. Ryan, and W. P. Wolf—267S
Low-temperature pyromagnetic measurements on nickel. E. W. Pugh and B. E. Argyle—334S
Magnetic anisotropy of cobalt as revealed by electron diffraction. S. Yamaguchi—961(L)
Magnetic anisotropies of nickel films evaporated and measured at 10^{-8} mm Hg and below. C. D. Graham, Jr., and J. M. Lommel—83S
Magnetic anisotropy of yttrium iron garnet at 0°K. L. R. Walker—264S
Magnetic annealing of "ticonal" G magnet steel. H. Zijlstra—194S
Magnetic characteristics of some intermetallic compounds between manganese and the lanthanide metals. L. V. Cherry and W. E. Wallace—340S
Magnetic core losses resulting from a rotating flux. Asa Kaplan—370S
Magnetic domain patterns in Cr-modified Mn_2Sb. J. D. Wolf and J. E. Hanlon—2584
Magnetic moments of compounds of cobalt with rare-earth elements having a Cu_5Ca structure. E. A. Nesbitt, H. J. Williams, J. H. Wernick, and R. C. Sherwood—342S
Magnetic ordering in the ferromagnetic rare-earth metals. Kei Yosida and Hirosi Miwa—8S
Magnetic properties of single-domain iron and iron-cobalt particles prepared by borohydride reduction. A. L. Oppegard, F. J. Darnell, and H. C. Miller—184S
Magnetic properties of the low-temperature form of magnetite. D. B. Bonstrom, A. H. Morrish, and L. A. K. Watt—272S
Magnetic thin films prepared by sputtering. Eric Kay —99S
Magnetization of iron-nickel alloys under hydrostatic pressure. J. S. Kouvel and R. H. Wilson—435
Magnetization of nickel single crystals. Lambros Tterlikkis and Alvin W. Jenkins, Jr.—1293
Magnetization process in small particles of CrO_2. F. J. Darnell—1269
Magnetocrystalline anisotropy of Fe-Si alloy crystals under hydrostatic pressure. J. S. Kouvel and R. H. Wilson—276S
Magnetoresistance and magnetic switching in Permalloy films. R. L. Coren and H. J. Juretschke—292S

Ferromagnetic Materials and Ferrites (*continued*)
Magnetoresistive measurements on domain rotation and wall development in Ni-Fe alloy films. Forrest G. West —290S
Metallurgy and magnetic properties of an Fe-Co-V alloy. C. W. Chen—348S
Microwave harmonic generation by ferrimagnetic crystals. D. D. Douthett, I. Kaufman, and A. S. Risley—1905
Microwave resonance in tetragonally distorted manganese-iron spinel. James Overmeyer—142S
New characteristic in the temperature dependence of ferrimagnetic resonance linewidth in some rare-earth doped yttrium iron garnets. J. F. Dillon, Jr.—159S
New magnetic ternary compound with a high crystalline anisotropy. J. H. Wernick, S. E. Haszko, and W. J. Romanow—2495(L)
Ni-Fe single-crystal films and their magnetic characteristics. R. R. Verderber and B. M. Kostyk—696
Nonlinear damping losses in YIG. Robert L. Conger—1525
Nonlinear response of YIG. Robert M. Hill and Robert S. Bergman—227S
Nuclear magnetic resonance of Fe^{57} in unenriched Fe. J. I. Budnick, L. J. Bruner, R. J. Blume, and E. L. Boyd—120S
Nuclear magnetic resonance in NiF_2 domain walls. R. G. Shulman—126S
Nuclear resonances in cubic, hexagonal, and mixed phase cobalt powders and thin films. Wilton A. Hardy—122S
Nucleation processes in thin Permalloy films. S. Methfessel, S. Middelhoek, and H. Thomas—294S
Optical and infrared spectra of the ferrites and garnets. Kenneth A. Wickersheim—205S
Partial rotation in Permalloy films. S. Methfessel, S. Middelhoek, and H. Thomas—1959
Particle interaction in magnetic recording tapes. J. G. Woodward and E. Della Torre—126(L)
Phase shift studies in ferrite-dielectric loaded coaxial lines at 2200 Mc. J. J. Rowley—321S
Preparation and properties of low-loss ferrites. Aaron P. Greifer, Yoshinao Nakada, and Howard Lessoff—382S
Preparation and properties of thin ferrite films. E. Banks, N. H. Riederman, H. W. Schleuning, and L. M. Silber —44S
Preparation, growth, and study of ultrafine ferrite particles. W. J. Schuele and V. D. Deetscreek—235S
Pressure and temperature dependence of the Fe^{57} nuclear magnetic resonance frequency in ferromagnetic iron. G. B. Benedek and J. Armstrong—106S
Quantitative determination of the interaction fields in aggregates of single-domain particles. Donald F. Eldridge —247S
Reinterpretation of the reaction kinetics of nickel ferrite. R. C. Turnbull—380S
Remarks on the magnetic properties of Au-Mn system. Hiroshi Sato—53S
Report on ferromagnetic resonance at the 1960 conference on magnetism and magnetic materials. George T. Rado —129S
Rotatable anisotropy in thin Permalloy films. R. J. Prosen, J. O. Holmen, and B. E. Gran—91S
Saturation magnetization and size of iron particles less than 100 A in diameter. Fred E. Luborsky and Philip E. Lawrence—231S
Some effects of directional ordering in zone-melted iron. R. E. Maringer—366S
Some investigations on iron-cobalt permanent magnet alloys of the Vicalloy II type. W. Baran, W. Breuer, H. Fahlenbrach, and K. Janssen—199S
Some properties of uniaxial Permalloy films prepared by cathodic sputtering. M. H. Francombe and A. J. Norcika —97S
Spin-flopping in MnF_2 by high magnetic fields. I. S. Jacobs—61S
Square-loop ferrites with temperature-independent properties and improved disturb ratio. R. S. Weisz—1152
Stable-oscillation conditions for the magnetic-film parametron. Richard M. Sanders—478
Structure of Alnico V. Robert B. Campbell and Carl A. Julien—192S
Structure of nickel chromite. E. Prince—68S
Studies of a high-coercivity electrodeposit having a lamellar structure. J. S. Sallo and K. H. Olsen—203S
Subsidiary resonance in YIG. T. S. Hartwick, E. R. Peressini, and M. T. Weiss—223S
Synthesis and properties of ferromagnetic chromium oxide. T. J. Swoboda, Paul Arthur, Jr., N. L. Cox, J. N. Ingraham, A. L. Oppegard, and M. S. Sadler—374S
Temperature dependence of magnetostriction and anisotropy in MnBi. P. A. Albert and W. J. Carr, Jr.—201S
Temperature dependence of the spin-wave spectrum of yttrium iron garnet. R. C. LeCraw and L. R. Walker—167S
Temperature dependence of spontaneous magnetization in superparamagnetic nickel. Carlos R. Abeledo and P. W. Selwood—229S
Theoretical and experimental characteristics of a ferromagnetic amplifier using longitudinal pumping. R. T. Denton—300S
Torque measurements on rare-earth doped yttrium iron garnet. R. F. Pearson and R. W. Cooper—265S
Transient excitation of nuclei in ferromagnetic metals. M. Weger, E. L. Hahn, and A. M. Portis—124S
Transmission electron microscopy of Alnico V. J. M. Capenos and Bani R. Banerjee—323(L)
Traveling-wave frequency doubling in ferrites. B. A. Auld, H. J. Shaw, and D. K. Winslow—317S
Triangular moment arrangements in manganese-iron spinels. Victor L. Moruzzi—59S
Two-phase Permalloy for high-speed switching. E. A. Nesbitt and E. M. Gyorgy—1305
Ultrasonic detection of changes in the elastic properties of a 70-30 iron-nickel alloy upon heat treatment. Emmanuel P. Papadakis and Everett L. Reed—682
Uniaxial anisotropy in polycrystalline garnets. D. J. Epstein, B. Frackiewicz, and R. P. Hunt—270S
Unidirectional properties in the iron-iron sulfide system. J. H. Greiner, I. M. Croll, and M. Sulich—188S
Useful technique for growing large, single-crystal YIG. Don Barry and Roy W. Roberts—1405(L)

Ferromagnet Resonance, Ferri-G Antiferromagnetism
Anisotropic Curie temperature. Earl R. Callen—221S
Antiferromagnetic resonance in $(Cr_2O_3)_{1-x}\cdot(Al_2O_3)_x$ single crystals. Simon Foner—63S
Effect of frequency modulation on subsidiary resonance in ferrites. J. F. Ollo and H. L. Goldstein—2050(L)
Excitation and boundary effects in spin-wave resonance. R. F. Soohoo—148S
Ferrimagnetic resonance and torque measurements on ytterbium-substituted yttrium iron garnet. R. W. Teale, R. F. Pearson, and M. J. Hight—150S
Ferrimagnetic resonance in a single-crystal disk of yttrium iron garnet. Archibald W. Smith and Akira Watanabe —155S
Ferrimagnetic resonance in single crystals of cobalt-substituted manganese ferrite. R. W. Teale and M. J. Hight—140S
Ferromagnetic relaxation at low microwave frequencies. J. J. Green and E. Schlömann—168S

Ferromagnetic resonance due to magnetic fields generated by displacement currents in ferrites. Isidore Bady and Gilbert McCall—146S
Ferromagnetic resonance in piezoelectric $Ga_{2-x}Fe_xO_3$. A. Dymanus and I. P. Kaminow—144S
Ferromagnetic resonance in thin magnetic films at radio frequencies. Turner E. Hasty and Lee J. Boudreaux —1807
Ferromagnetic resonance linewidth in cobalt-substituted ferrites. C. Warren Haas and Herbert B. Callen—157S
Infrared antiferromagnetic resonance in MnO. F. Keffer, A. J. Sievers, III, and M. Tinkham—65S
Microwave harmonic generation by ferrimagnetic crystals. D. D. Douthett, I. Kaufman, and A. S. Risley—1905
Microwave resonance in tetragonally distorted manganese-iron spinel. James Overmeyer—142S
New characteristic in the temperature dependence of ferrimagnetic resonance linewidth in some rare-earth doped yttrium iron garnets. J. F. Dillon, Jr.—159S
Note on ferromagnetic relaxation equations. H. Suhl and R. C. Fletcher—281
Note on the back reaction term in ferromagnetic relaxation equations. Herbert Callen—738(L)
Parametric effects in magnetoacoustic resonance. R. L. Comstock, B. A. Auld, and Glen Wade—227S
Report on ferromagnetic resonance at the 1960 conference on magnetism and magnetic materials. George T. Rado —129S
Resonant frequency shift in ellipsoidal samples. T. Matcovich, Henry S. Belson, and N. Goldberg—163S
Subsidiary absorption above ferrimagnetic resonance. P. C. Fletcher and Neal Silence—706
Subsidiary resonance in YIG. T. S. Hartwick, E. R. Peressini, and M. T. Weiss—223S

Fluid Dynamics

Flow of gas through porous media in the region between molecular and viscous condition. E. H. Hirsch—977
Quantitative analysis of two-dimensional flow by means of streaming birefringence. S. P. Sutera and Harold Wayland—721
Resistance to potential flow through a cubical array of spheres. Robert E. Meredith and Charles W. Tobias —132(E)

Fluid Flow, Low Speed

Extension of the Eyring-Ree theory of non-Newtonian flow. Joseph A. Faucher—2336
Non-Newtonian viscosity of polymers. Roger S. Porter and Julian F. Johnson—2326
Nuclear magnetic resonance in flowing liquids. Louis R. Hirschel and Louis F. Libelo—1404(L)
Study of impact cratering in sand. F. L. Culp and H. L. Hooper—2480
Thermorheological simplicity in extrusion flow curves of high polymers. Katsuhiko Ito—1743

Fracture (see also Plastic Deformation)

Crack propagation in a strain-crystallizing elastomer. E. H. Andrews—452
Electrically imploded-exploded aluminum tube. Eugene C. Cnare—1275
Fracture of brittle solids. I. Distribution function for fragment size in single fracture (Theoretical). J. J. Gilvarry—391
Fracture of brittle solids. II. Distribution function for fragment size in single fracture (Experimental). J. J. Gilvarry and B. H. Bergstrom—400
Reduction of cohesion in ionic crystals by dislocations. John J. Gilman—738(L)

Friction and Wear

Frictional behavior of a simple rheological material. R. T. Spurr—1450
Friction and adhesion of clean and contaminated mica surfaces. Anita I. Bailey—1407
Friction of metals in reciprocating sliding. Yasukatsu Tamai—1437
Friction of molybdenum diselenide. Melvin T. Lavik, T. Bruce Daniel, and A. Neal Abbott—1795(L)
Influence of surface energy on friction and wear phenomena. E. Rabinowicz—1440
Lubrication of polymers. C. Rubenstein—1445
On the wear of sapphire. R. P. Steijn—1951
Preface to international conference on the nature of solid friction—1407
Recent work on solid friction at the Research Laboratory for the Physics and Chemistry of Solids. Anita I. Bailey—1413
Rolling friction of polymeric materials. II. Thermoplastics. D. G. Flom—1426
Single contacts and multiple encounters. J. F. Archard—1420
Use of graphite whiskers in a study of the atmosphere dependence of graphite friction. F. R. Rollins, Jr.—1454

Gaseous Electron Physics (see also Sputtering)

A theory for the cathode mechanism in metal vapor arcs. T. H. Lee and Allan Greenwood—2061(E)
Calculation of the maximum efficiency of the thermionic converter. John H. Ingold—769
Discharge photocells for the detection of resonance radiation. W. E. Bell and A. L. Bloom—906
Electrical conduction and breakdown in high-pressure (0.25–300 mm) rare gases. R. Forman—1651
Electrical conductivity in flame gases with large concentrations of potassium. G. J. Mullaney, P. H. Kydd, and N. R. Dibelius—668
Electron bunching in the multipacting mechanism of high-frequency discharge. Albert J. Hatch—1086
Electronic and ionic current at the cathode of a hollow-cathode discharge. V. K. Rohatgi—1173(L)
End effect losses in dc magnetohydrodynamic generators. Roland A. Boucher and Dennis B. Ames—755
Experimental study of arc stability. II. An investigation of mercury arc stability. G. A. Farrall and G. H. Reiling —1528
Magnetically confined cold-cathode gas discharges at low pressures. R. L. Jepsen—2619
New derivation of the vacuum breakdown equation relating breakdown voltage and electrode separation. A. Maitland —2399
Note on the mechanism of the multipactor effect. F. Paschke—747(L)
On the question of ball lightning. Paul A. Silberg—30
Relaxation oscillations in a plasma diode. J. M. Rocard and G. W. Paxton—1171(L)
Resistance heating in the arc cathode spot zone. J. A. Rich—1023
Scaling laws for electric arcs subject to forced convection. Christopher Sherman and J. M. Yos—744(L)
Space-charge instabilities in electron diodes and plasma converters. C. K. Birdsall and W. B. Bridges—2611
Theory for the cathode mechanism in metal vapor arcs. T. H. Lee and Allan Greenwood—916

Glasses and Amorphous Solids (see also Polymers)

Application of the three-parameter stress function to natural rubbers of widely different hardness. A. J. Carmichael and H. W. Holdaway—1724
Concerning dislocations in glass. W. B. Hillig and R. J. Charles—123(L)
Defect mechanisms in a noncrystalline solid. W. C. Levengood—2525

Glasses and Amorphous Solids (*continued*)
Frequency factors for annealing fast-neutron induced density changes in vitreous silica. William Primak, Herman Szymanski, and David Keiffer—660
Helium diffusion through glass. V. O. Altemose—1309
Optical properties of oriented polystyrene. Richard S. Stein—1280
Polarization and diffusion in a silicate glass. R. J. Charles—1115
Semiconducting properties of inorganic amorphous materials. H. L. Uphoff and J. H. Healy—950
Sputtering of vitreous silica by 20- to 60-kev Xe^+ ions. R. L. Hines and R. Wallor—202
Strength of bulk fused quartz. William B. Hillig—741(L)
Thermal conductivity of porous media. I. Unconsolidated sands. W. Woodside and J. H. Messmer—1688
Thermal conductivity of porous media. II. Consolidated rocks. W. Woodside and J. H. Messmer—1699
Transparency of glass and certain plastics under shock attack. H. Dean Mallory and William S. McEwan—2421
Vacuum-ultraviolet absorption studies of irradiated silica and quartz. C. M. Nelson and R. A. Weeks—883

Liquids
Diffusion in a liquid indium-tin alloy at several concentrations. A. Paoletti and M. Vicentini-Missoni—559
Experimental investigation of the Sumoto effect. William F. Pickard—1888
Formation of liquid jets in nonuniform electric fields. Herbert A. Pohl—1784(L)
Hydromagnet: a self-generating liquid conductor electromagnet. Henry H. Kolm and Osman K. Mawardi—1296
Liquidlike layers on ice. H. H. G. Jellinek—1793(L)
Optical spectrum of the sonoluminescence emitted by cavitated water. Devanatha Srinivasan and Louis V. Holroyd—449
Space-time analysis of the sonoluminescence emitted by cavitated water. Robert Q. Macleay and Louis V. Holroyd—449

Luminescence
Edge emission in zinc selenide single crystals. D. C. Reynolds, L. S. Perdotti, and O. W. Larson—2250
Effects of phosphor powder dispersion in electroluminescent lamps. W. A. Thornton—2379
Effects of rare-earth substitutions on the fluorescence of terbium hexa-antipyrine tri-iodide. R. R. Soden—750(L)
Effect of electron bombardment on the near-infrared fluorescence of single-crystal CdS. B. A. Kulp—1966
Electroluminescence of *p-n* junctions in gallium phosphide. M. Gershenzon and R. M. Mikulyak—1338
Etch pits in electroluminescent zinc sulfide crystallites. Paul Goldberg—1520
Measurement of minority carrier lifetime in SiC by a novel electroluminescent method. G. G. Harman and R. L. Raybold—1168(L)
Monotonic trap distributions. Richard H. Bube—1621(L)
Optical spectrum of the sonoluminescence emitted by cavitated water. Devanatha Srinivasan and Louis V. Holroyd—449
Space-time analysis of the sonoluminescence emitted by cavitated water. Robert Q. Macleay and Louis V. Holroyd—449
Theory of microplasma instability in silicon. R. J. McIntyre—983
Thermal tuning of ruby optical maser. I. D. Abella and H. Z. Cummins—1177(L)
Use of $PrCl_3$ in a solid state infrared quantum counter. John F. Porter, Jr.—825
Use of $PrCl_3$ in a solid-state infrared quantum counter. John F. Porter, Jr.—1803(E)
Voltage dependence of microplasma density in *p-n* junctions in silicon. A. Goetzberger and C. Stephens—2646

Magnetic Anisotropy
Acceleration of rigid, conducting, diamagnetic bodies by a magnetic field. R. U. Ayers—1549
Angular dependence of torque in anisotropic permalloy films. W. D. Doyle, J. E. Rudisill, and S. Shtrikman—1785(L)
Anisotropy and magnetostriction in magnetic oxides. J. C. Slonczewski—253S
Anisotropy in nickel-iron films. D. O. Smith—70S
Anisotropy in permalloy films evaporated at grazing incidence. M. S. Cohen—87S
Anisotropy of the spin-wave spectrum. M. W. Muller and C. R. Buffler—152S
Anisotropy of YIG calculated from crystal field parameters Fe^{3+} in yttrium gallium garnet. S. Geschwind—263S
Anisotropy rotation in thin permalloy films at room temperature. T. Matcovich, E. Korostoff, and A. Schmeckenbecher—93S
Exchange anisotropy in mixed manganites with the hausmannite structure. I. S. Jacobs and J. S. Kouvel—274S
Exchange anisotropy in oxidized iron-cobalt particles. F. J. Darnell—186S
Exchange anisotropy in stainless steel. W. H. Meiklejohn—274S
First magnetocrystalline anisotropy constants of some iron-silicon alloys. Sigurds Arajs, Henry Chessin, and D. S. Miller—857
General superparamagnetic behavior of an aligned assembly of uniaxially anisotropic particles. Forrest G. West—249S
Induced magnetic anisotropy created by magnetic or stress annealing of iron-aluminum alloys. H. J. Birkenbeil and R. W. Cahn—362S
Magnetic anisotropy and electrical resistivity in exchange inversion compounds. H. S. Jarrett, P. E. Bierstedt, F. J. Darnell, and M. Sparks—57S
Magnetic anisotropy of cobalt as revealed by electron diffraction. S. Yamaguchi—961(L)
Magnetic anisotropies of nickel films evaporated and measured at 10^{-8} mm Hg and below. C. D. Graham, Jr., and J. M. Lommel—83S
Magnetic anisotropy of yttrium iron garnet at 0°K. L. R. Walker—264S
Magnetocrystalline anisotropy of Fe-Si alloy crystals under hydrostatic pressure. J. S. Kouvel and R. H. Wilson—276S
New magnetic ternary compound with a high crystalline anisotropy. J. H. Wernick, S. E. Haszko, and W. J. Romanow—2495(L)
Oblique-incidence anisotropy in evaporated films. M. S. Cohen, D. O. Smith, and G. P. Weiss—1405(E)
Rotatable anisotropy in thin permalloy films. R. J. Prosen, J. O. Holmen, and B. E. Gran—91S
Some effects of directional ordering in zone-melted iron. R. E. Maringer—366S
Temperature dependence of magnetostriction and anisotropy in MnBi. P. A. Albert and W. J. Carr, Jr.—201S
Theoretical magnetization curves for particles with cubic anisotropy. Clark E. Johnson, Jr. and William Fuller Brown, Jr.—243S
Torque measurements on rare-earth doped yttrium iron garnet. R. F. Pearson and R. W. Cooper—265S
Uniaxial anisotropy in polycrystalline garnets. D. J. Epstein, B. Frackiewicz, and R. P. Hunt—270S

Magnetic Domain Wall Behavior
Development of elongated particle magnets. Fred E. Luborsky—171S

Domains and extreme value statistics. William Fuller Brown, Jr.—278S
Domain structures in iron whiskers as observed by the Kerr method. C. A. Fowler, Jr., E. M. Fryer, and D. Treves—296S
Domain wall mobility in single-crystal yttrium iron garnet. F. B. Hagedorn and E. M. Gyorgy—282S
Limitations of the magneto-optic Kerr technique in the study of microscopic magnetic domain structures. D. Treves—358
Magnetic domain patterns in Cr-modified Mn_2Sb. J. D. Wolf and J. E. Hanlon—2584
Magnetic properties of single-domain iron and iron-cobalt particles prepared by borohydride reduction. A. L. Oppegard, F. J. Darnell, and H. C. Miller—184S
Magnetic viscosity due to solute atom pairs. Part II. Experimental results. G. Biorci, A. Ferro, and G. Montalenti—630
Magnetoresistive measurements on domain rotation and wall development in Ni-Fe alloy films. Forrest G. West—290S
Measurements of the domain wall area-mobility product during slow flux reversals. R. M. Brownell and R. C. Barker—284S
Nuclear magnetic resonance in NiF_2 domain walls. R. G. Shulman—126S
Observations of cross-tie domain walls by the Faraday effect. A. L. Houde—1234
On additivity of imperfections as means for domain nucleation. A. Aharoni—245S
Properties of single-domain particles of cobalt-nickel. R. B. Falk and G. D. Hooper—2536
Transmission electron microscope observations of magnetic domain walls. J. T. Michalak and R. C. Glenn—1261

Magnetic Devices

Acceleration of rigid, conducting, diamagnetic bodies by a magnetic field. R. U. Ayers—1549
Alternating current magnetohydrodynamic generator. P. R. Smy—1946
Antiferromagnetic materials for millimeter and submillimeter devices. G. S. Heller, J. J. Stickler, and J. B. Thaxter—370S
Compact uhf isolator. D. Bruce Swartz—319S
Demagnetization of twistor bits. W. A. Barrett—35S
Development of elongated particle magnets. Fred E. Luborsky—171S
End effect losses in dc magnetohydrodynamic generators. Roland A. Boucher and Dennis B. Ames—755
Ferrite system for application at lower microwave frequencies. Clinton F. Jefferson and Russell G. West—390S
Fields in cavity-excited accelerators. E. G. Cristal and J. Van Bladel—1715
Fine-wire ferrite limiter. Ernest Stern—315S
High-power characteristics of low-magnetization garnets. J. H. Saunders and J. J. Green—161S
Hydromagnet: a self-generating liquid conductor electromagnet. Henry H. Kolm and Osman K. Mawardi—1296
Impulse selection for core logic. Roger H. Tancrell—40S
Influence of nearby conductors on thin-film switching. J. S. Eggenberger—752(E)
Influence of tensor conductivity on current distribution in a MHD generator. H. Hurwitz, Jr., R. W. Kilb, and G. W. Sutton—205
Instability of magnetostatic modes in a microwave magnetic field applied parallel to the dc field. E. Schlömann and R. I. Joseph—165S
Magnetically confined cold-cathode gas discharges at low pressures. R. L. Jepsen—2619
Magnetic film devices using passive loading. J. M. Daughton, T. A. Smay, A. V. Pohm, and A. A. Read—36S
Perturbation techniques for miniaturized coaxial Y-junction circulators. John Clark—323S
Phase shift studies in ferrite-dielectric loaded coaxial lines at 2200 Mc. J. J. Rowley—321S
Possibilities of all-magnetic logic. U. F. Gianola—27S
Possibility of a spin wave magnetic-moment detector. T. B. Day and J. Sucher—1788(L)
Preliminary operation of a four-sector racetrack microtron. Eric Brannen and H. Froelich—1179(L)
Production of magnetic fields exceeding 15 kilogauss by a superconducting solenoid. J. E. Kunzler, E. Buehler, F. S. L. Hsu, B. T. Matthias, and C. Wahl—325(L)
Recording and reproduction of NRZI signals. R. S. Schools—42S
Theoretical and experimental characteristics of a ferromagnetic amplifier using longitudinal pumping. R. T. Denton—300S
Traveling-wave frequency doubling in ferrites. B. A. Auld, H. J. Shaw, and D. K. Winslow—317S
Two-phase permalloy for high-speed switching. E. A. Nesbitt and E. M. Gyorgy—1305

Magnetic Susceptibility

Acceleration of rigid, conducting, diamagnetic bodies by a magnetic field. R. U. Ayers—1549
de Haas-van Alphen effect in p-type PbTe and n-type PbS. P. J. Stiles, E. Burstein, and D. N. Langenberg—2174
General superparamagnetic behavior of an aligned assembly of uniaxially anisotropic particles. Forrest G. West—249S
Magnetic susceptibility of $FeCl_3 \cdot 4H_2O$ at low temperatures. R. D. Pierce and S. A. Friedberg—66S
Paramagnetism of polycrystalline gadolinium, terbium, and dysprosium metals. Sigurds Arajs and R. V. Colvin—336S
Some effects of directional ordering in zone-melted iron. R. E. Maringer—366S

Magnetic Structure (Spin Orientation, Antiferromagnetism, and Spin Waves)

Anisotropy of the spin-wave spectrum. M. W. Muller and C. R. Buffler—152S
Antiferromagnetic materials for millimeter and submillimeter devices. G. S. Heller, J. J. Stickler, and J. B. Thaxter—307S
Antiferromagnetic resonance in $(Cr_2O_3)_{1-x} \cdot (Al_2O_3)_x$ single crystals. Simon Foner—63S
Antiferromagnetism of α-Mn and its alloys. Anthony Arrott and B. R. Coles—51S
Classical theory of the ground spin state in spinels. T. A. Kaplan, K. Dwight, D. Lyons, and N. Menyuk—13S
Damping effects of thin surface films. R. J. Huber, G. S. Baker, and P. Gibb—2488(L)
Electrical resistivity of chromium in the vicinity of the Néel temperature. M. J. Marcinkowski and H. A. Lipsitt—1238
Exchange inversion in $Mn_{2-x}Cr_xSb$. W. H. Cloud, T. A. Bither, and T. J. Swoboda—55S
Excitation and boundary effects in spin-wave resonance. R. F. Soohoo—148S
Experimental g' and g values of Fe, Co, Ni, and their alloys. A. J. P. Meyer and G. Asch—330S
Ferromagnetic alignment by antiferromagnetic exchange interaction. Note on the magnetic behavior of neodymium garnet. W. P. Wolf—742(L)
Infrared antiferromagnetic resonance in MnO. F. Keffer, A. J. Sievers, III, and M. Tinkham—65S

Magnetic Structure (*continued*)
Instability of magnetostatic modes in a microwave magnetic field applied parallel to the dc field. E. Schlömann and R. I. Joseph—165S
Instability of spin waves and magnetostatic modes in a microwave magnetic field applied parallel to the dc field. E. Schlömann and R. I. Joseph—1006
Low-temperature magnetic properties of some rare-earth garnet compounds. M. Ball, G. Garton, M. J. M. Leask, D. Ryan, and W. P. Wolf—267S
Magnetic anisotropy and electrical resistivity in exchange inversion compounds. H. S. Jarrett, P. E. Bierstedt, F. J. Darnell, and M. Sparks—57S
Magnetic investigation of pure manganese and of several of its alloys. H. W. Cooper, A. S. Arrott, and H. W. Paxton—2506
Magnetic moments of compounds of cobalt with rare-earth elements having a Cu_5Ca structure. E. A. Nesbitt, H. J. Williams, J. H. Wernick, and R. C. Sherwood—342S
Magnetic ordering in the ferromagnetic rare-earth metals. Kei Yosida and Hirosi Miwa—8S
Magnetic properties of the low-temperature form of magnetite. D. B. Bonstrom, A. H. Morrish, and L. A. K. Watt—272S
Magnetization process of a helical spin configuration. U. Enz—22S
Neutron diffraction by helical spin structures. W. C. Koehler—20S
Neutron diffraction investigation of magnetic ordering in dysprosium. M. K. Wilkinson, W. C. Koehler, E. O. Wollan, and J. W. Cable—48S
Neutron diffraction study of metallic erbium. J. W. Cable, E. O. Wollan, W. C. Koehler, and M. K. Wilkinson—49S
Nonlinear damping losses in YIG. Robert L. Conger—1525
On the contribution of the Fermi contact term to the magnetic field at the nucleus. R. E. Watson and A. J. Freeman—118S
On the nature of the magnetic couplings in transitional metals. J. Friedel, G. Leman, and S. Olszewski—325S
Partial rotation in permalloy films. S. Methfessel, S. Middelhoek, and H. Thomas—1959
Possibility of a spin wave magnetic-moment detector. T. B. Day and J. Sucher—1788(L)
Remarks on the magnetic properties of Au-Mn system. Hiroshi Sato—53S
Simple physical theory of spin wave interactions. F. Keffer and R. Loudon—2S
Specific heat of superparamagnetic particles. J. D. Livingston and C. P. Bean—1964
Spin-flopping in MnF_2 by high magnetic fields. I. S. Jacobs—61S
Spin waves in complex exchange-coupled lattices and neutron scattering. A. W. Saenz—752(E)
Temperature dependence of the spin-wave spectrum of yttrium iron garnet. R. C. LeCraw and L. R. Walker—167S
Theory of magnetostatic modes in long, axially magnetized cylinders. R. I. Joseph and E. Schlömann—1001
Triangular moment arrangements in manganese-iron spinels. Victor L. Moruzzi—59S

Magnetization
Analytic hysteresis function. F. H. Middleton—251S
Angular variation of the magnetic properties of partially aligned γ-Fe_2O_3 particles. G. Bate—239S
Annealing behavior and temperature dependence of the magnetic properties of thin permalloy films. Armin Segmüller—89S
Backward waves in longitudinally magnetized ferrite rods. G. H. B. Thompson—2491(L)
Coherent and incoherent magnetization processes in powders. S. Shtrikman and E. P. Wohlfarth—241S
Comment on the saturation magnetization of neodymium yttrium iron garnet. Robert L. White—1178(L)
Demagnetization of twistor bits. W. A. Barrett—35S
Determination of the directions of magnetization in polycrystalline ferrites. D. R. Callaby—298S
Development of elongated particle magnets. Fred E. Luborsky—171S
Domain wall mobility in single-crystal yttrium iron garnet. F. B. Hagedorn and E. M. Gyorgy—282S
Dynamic stability of a conducting, cylindrical shell in magnetic field. J. G. Linhart—500
Epitaxial growth and magnetic properties of single-crystal films of iron, nickel, and permalloy. Soshin Chikazumi—81S
Ferromagnetic nucleation sources on iron whiskers. R. E. De Blois—1561
Flux distribution in ferrite cores under various modes of partial switching. R. H. James, W. M. Overn, and C. W. Lundberg—38S
Free carrier cyclotron resonance, Faraday rotation, and Voigt double refraction in compound semiconductors. E. D. Palik, S. Teitler, and R. F. Wallis—2132
Free oscillations of the magnetization in permalloy films. Peter Wolf—95S
High-temperature magnetic lag in iron-nickel alloys. Dieter Gerstner and Eckart Kneller—364S
Losses in silicon iron at very low frequencies and high flux densities. Daniel A. Wycklendt and Robert M. Kay—368S
Initial permeability characteristics of vanadium-doped manganese-zinc ferrites. Yūzō Shichijō, Noboru Tsuya, and Kōki Suzuki—386S
Instability of spin waves and magnetostatic modes in a microwave magnetic field applied parallel to the dc field. E. Schlömann and R. I. Joseph—1006
Low-temperature pyromagnetic measurements on nickel. E. W. Pugh and B. E. Argyle—334S
Magnetic annealing of "ticonal" G magnet steel. H. Zijlstra—194S
Magnetic core losses resulting from a rotating flux. Asa Kaplan—370S
Magnetic viscosity due to solute atom pairs. Part II. Experimental results. G. Biorci, A. Ferro, and G. Montalenti—630
Magnetization curve of an infinite cylinder. M. W. Muller and A. Wehlau—2448
Magnetization of iron-nickel alloys under hydrostatic pressure. J. S. Kouvel and R. H. Wilson—435
Magnetization of nickel single crystals. Lambros Tterlikkis and Alvin W. Jenkins, Jr.—1293
Magnetization process in small particles of CrO_2. F. J. Darnell—1269
Measurements of the domain wall area-mobility product during slow flux reversals. R. M. Brownell and R. C. Barker—284S
Nonlinear response of YIG. Robert M. Hill and Robert S. Bergman—227S
Production of magnetic fields exceeding 15 kilogauss by a superconducting solenoid. J. E. Kunzler, E. Buehler, F. S. L. Hsu, B. T. Matthias, and C. Wahl—325(L)
Quantitative determination of the interaction fields in aggregates of single-domain particles. Donald F. Eldridge—247S
Remanent magnetization of a synthetic hematite single crystal. S. T. Lin—394S
Saturation magnetization and size of iron particles less than 100 A in diameter. Fred E. Luborsky and Philip E. Lawrence—231S

Square-loop ferrites with temperature-independent properties and improved disturb ratio. R. S. Weisz—1152
Studies of a high-coercivity electrodeposit having a lamellar structure. J. S. Sallo and K. H. Olsen—203S
Temperature dependence of spontaneous magnetization in superparamagnetic nickel. Carlos R. Abeledo and P. W. Selwood—229S
Theoretical magnetization curves for particles with cubic anisotropy. Clark E. Johnson, Jr., and William Fuller Brown, Jr.—243S
Theory of magnetostatic modes in long, axially magnetized cylinders. R. I. Joseph and E. Schlömann—1001
Torque measurements on rare-earth doped yttrium iron garnet. R. F. Pearson and R. W. Cooper—265S
Two-phase permalloy for high-speed switching. E. A. Nesbitt and E. M. Gyorgy—1305
Unidirectional properties in the iron-iron sulfide system. J. H. Greiner, I. M. Croll, and M. Sulich—188S

Masers and Lasers

Cross-doping agents for rutile masers. P. F. Chester—866
A cw solid state, push-pull maser in the 5- to 6-millimeter wavelength region. David L. Carter—2541
Electron beam excitation of a Fabry-Perot interferometer. Murray D. Sirkis, Robert J. Strain, and William E. Kunz—2055(L)
Growth of single-crystal calcium fluoride with rare-earth impurities. H. Guggenheim—1337
Maser action in emerald. F. E. Goodwin—1624(L)
Optically efficient ruby laser pump. P. A. Miles and H. E. Edgerton—740(L)
Paramagnetic maser oscillator analysis. S. Wang and J. R. Singer—1371
Power output characteristics of a ruby laser. Malcolm L. Stitch—1994
Probabilities for the neon laser transitions. G. F. Koster and H. Statz—2054(L)
Proposed fiber cavities for optical masers. E. Snitzer—36
Seesaw maser operation. P. A. Forrester and W. B. Mims —317
Single-crystal molybdates for resonance and emission studies. G. Van Uitert, F. W. Swanekamp, and S. Preziosi —1176(L)
Thermal tuning of ruby optical maser. I. D. Abella and H. Z. Cummins—1177(L)
Spatial coherence in the output of an optical maser. D. F. Nelson and R. J. Collins—739(L)
Stimulated emission from HCN gas maser observed at 88.6 kMc. D. Marcuse—743(L)
Theory of laser oscillations in Fabry-Perot resonators. J. Kotik and M. C. Newstein—178
Use of $PrCl_3$ in a solid-state infrared quantum counter. John F. Porter, Jr.—825
Use of $PrCl_3$ in a solid-state infrared quantum counter. John F. Porter, Jr.—1803(E)
Zero-field splitting of the Cr^{3+} ground state in YGa and YAl garnet. J. E. Carson and R. L. White—1787(L)

Mass Spectrometry

Mass spectrographic analysis of insulators using a vacuum spark positive ion source. A. J. Ahearn—1195
Mass spectrographic detection of impurities in liquids. A. J. Ahearn—1197
Reactions of oxygen with pure tungsten and tungsten containing carbon. J. A. Becker, E. J. Becker, and R. G. Brandes—411

Mathematics

Analysis of a nonlinear first-order system with a white noise input. T. K. Caughey and J. K. Dienes—2476
Analytic solution of the double-diffusion problem. K. C. Nomura—1167(L)
An approximate solution of Fick's diffusion equation. T. Tsang—1518
Equation of motion of the torsion pendulum and the complex modulus. N. W. Tschoegl—1794(L)
Instability of spin waves and magnetostatic modes in a microwave magnetic field applied parallel to the dc field. E. Schlömann and R. I. Joseph—1006
Measurement of noise power spectra by Fourier analysis. A. Ziya Akcasu—565
Resistance as dissipation into many reactive circuits: Landau damping and Nyquist's noise theorem. O. Buneman—1783(L)
Scattering of plane waves by a rigid ribbon in a solid. K. Harumi—1488
Similarity function for pattern recognition. Dan McLachlan, Jr.—1795(L)
Theory of magnetostatic modes in long, axially magnetized cylinders. R. I. Joseph and E. Schlömann—1001
Theory of quantum oscillators in a multimode cavity. W. G. Wagner and G. Birnbaum—1185
Thermoelastic equations and Grueneisen's relation. A. M. Freudenthal—1801(L)
Transduction of noise. Theory of a generalized traveling-wave coupler. M. C. Pease—1145

Metallurgical Processes (Precipitation, Order-Disorder, Phase Transformations)

Acoustical study of quench-aging in α Cu-Al alloys. T. J. Koppenaal and M. E. Fine—1781
Characteristics of the annealing kinetics of tin films deposited at 88°K. J. Priest, C. Chiou, and H. L. Caswell —1772
Clustering in an alpha iron-molybdenum solid solution. Erhard Hornbogen—132
Crystal lattice investigation of the permanent magnet precipitate in various Alnico materials. K. J. Kronenberg—196S
Diffusion in a liquid indium-tin alloy at the eutectic concentration. A. Paoletti and M. Vicentini—22
Diffusion reactions in the aging of 4-79 molybdenum permalloy. E. M. Tolman—360S
Electrical resistivities of nickel-niobium solid solutions. Sigurds Arajs—97
Metallurgy and magnetic properties of an Fe-Co-V alloy. C. W. Chen—348S
Mondrian precipitation patterns in single crystals of titanium carbide. Wendell S. Williams—552(L)
On the internal friction of cold-worked and quenched martensitic iron and steel. T. Mura, I. Tamura, and J. O. Brittain—92
On the interpretation of internal friction experiments on strain aging of iron. J. C. Swartz—2048(L)
On the possibility of detecting shock-induced second-order phase transitions in solids. The equation of state of Invar. D. R. Curran—1811
Phase diagram for the pseudobinary system Ag_2Te-Sb_2Te_3. J. P. McHugh, W. A. Tiller, S. E. Haszko, and J. H. Wernick—1785(L)
Precipitation in gold-nickel single crystals. P. J. Flanders and F. R. L. Schoening—344S
Precipitation of helium along dislocations in aluminum. G. T. Murray—1045
Precipitation sites in aluminum alloys. G. R. Frank, Jr., D. L. Robinson, and G. Thomas—1763
Reinterpretation of the reaction kinetics of nickel ferrite. R. C. Turnbull—380S
Shock wave compression of hardened and annealed 2024 aluminum. G. R. Fowles—1475
Smooth spalls and the polymorphism of iron. John O. Erkman—939

Metallurgical Processes (*continued*)
Thermal conductivity in two-phase alloys. J. B. Schroeder —1798(L)
Transformation—disorder to order in Ni_3Mn. M. J. Marcinkowski and N. Brown—375
Transitions and relaxations in polytetrafluoroethylene. R. K. Eby and K. M. Sinnott—1765
Voids in resolidified drops of molten metal. J. C. Kelly —1797(L)
Molecular Beams (see also Mass Spectrometry)
Guidance and collimation of sputtered tungsten particles. Carl A. Ludeke—1400(L)

Noise
Analysis of a nonlinear first-order system with a white noise input. T. K. Caughey and J. K. Dienes—2476
Confirmation of lifetimes by noise and by Haynes-Shockley method. Susumu Okazaki—712
Effect of gaseous ambients upon $1/f$ noise in germanium filaments. F. E. Noble and J. E. Thomas, Jr.—1709
Excess noise in germanium and gallium-arsenide Esaki diodes in the negative resistance region. M. D. Montgomery—2408
Likelihood detection of small signals in stationary noise. Philip Rudnick—140
Measurement of noise power spectra by Fourier analysis. A. Ziya Akcasu—565
Noise in InSb photodiodes. B. R. Pagel and R. L. Petritz —1901
On the theory of amplitude distribution of impulsive random noise. K. Furutsu and T. Ishida—1206
Production and analysis of a large-diameter plasma beam. B. B. Meckel and P. A. Harkins—489
Thermal noise in dissipative media. H. A. Haus—493
Transduction of noise. Theory of a generalized traveling-wave coupler. M. C. Pease—1145
Nuclear Magnetic Resonance
NMR and the conduction electron polarization in rare-earth metals. V. Jaccarino—102S
Nuclear magnetic resonance in flowing fluids. Louis R. Hirschel and Louis F. Libelo—1404(L)
Nuclear magnetic resonance in NiF_2 domain walls. R. G. Shulman —126S
Nuclear magnetic resonance of Fe^{57} in unenriched Fe. J. I. Budnick, L. J. Bruner, R. J. Blume, and E. L. Boyd—120S
Nuclear resonances in cubic, hexagonal, and mixed phase cobalt powders and thin films. Wilton A. Hardy—122S
Pressure and temperature dependence of the Fe^{57} nuclear magnetic resonance frequency in ferromagnetic iron. G. B. Benedek and J. Armstrong—106S
Transient excitation of nuclei in ferromagnetic metals. M. Weger, E. L. Hahn, and A. M. Portis—124S
Nuclear Physics
Mössbauer effect: Applications to magnetism. G. K. Wertheim—110S

Optical Properties
Birefringence due to dislocations in glide bands of rock-salt single crystals. S. Mendelson—1999
Dichroic color centers in calcium fluorophosphate. Peter D. Johnson—127(L)
Domain structures in iron whiskers as observed by the Kerr method. C. A. Fowler, Jr., E. M. Fryer, and D. Treves—296S
Effect of electron bombardment on the near-infrared fluorescence of single-crystal CdS. B. A. Kulp—1966
Electrical and optical properties of mercury selenide (HgSe). H. Gobrecht, U. Gerhardt, B. Peinemann, and A. Tausend—2246
Electrical and optical properties of the II–V compounds. W. J. Turner, A. S. Fischler, and W. E. Reese—2241
Electrical control of the critical angle of total reflection. H. Nassenstein—2488(L)
Energy band structure of gallium antimonide. W. M. Becker, A. K. Ramdas, and H. Y. Fan—2094
Excitons and band splitting produced by uniaxial stress in CdTe. D. G. Thomas—2298
Excitons and the absorption edge of ZnO. R. E. Dietz, J. J. Hopfield, and D. G. Thomas—2282
Exciton states and band structure in CdS and CdSe. J. J. Hopfield—2277
Exciton structure and Zeeman effects in cadmium selenide. J. O. Dimmock and R. G. Wheeler—2271
Far infrared and microwave detector. D. W. Goodwin and R. H. Jones—2056(L)
Free carrier cyclotron resonance, Faraday rotation, and Voigt double refraction in compound semiconductors. E. D. Palik, S. Teitler, and R. F. Wallis—2132
Fundamental reflectivity spectrum of semiconductors with zinc-blende structure. Manuel Cardona—2151
Infrared antiferromagnetic resonance in MnO. F. Keffer, A. J. Sievers, III, and M. Tinkham—65S
Infrared properties of flame-fused MnO crystals. E. Loh and R. Newman—470
Interband Faraday rotation in III–V compounds. Benjamin Lax and Yuichiro Nishina—2128
Investigations on SnS. W. Albers, C. Haas, H. J. Vink, and J. D. Wasscher—2220
Lattice absorption in gallium arsenide. W. Cochran, S. J. Fray, F. A. Johnson, J. E. Quarrington, and N. Williams—2102
Limitations of the magneto-optic Kerr technique in the study of microscopic magnetic domain structures. D. Treves—358
Magnetoreflection experiments in intermetallics. George B. Wright and Benjamin Lax—2113
Observations of cross-tie domain walls by the Faraday effect. A. L. Houde—1234
Optical absorption edge in GaAs and its dependence on electric field. T. S. Moss—2136
Optically efficient ruby laser pump. P. A. Miles and H. E. Edgerton—740(L)
Optical properties of free electrons in CdS. W. W. Piper and D. T. F. Marple—2237
Optical properties of lead-salt and III–V semiconductors. Frank Stern—2166
Optical properties of oriented polystyrene. Richard S. Stein—1280
Optical studies of the band structure of InP. Manuel Cardona—958(L)
Oscillatory magnetoabsorption in InSb under high resolution. S. Zwerdling, W. H. Kleiner, and J. P. Theriault —2118
Photoconductivity of CdS-type photoconductors in the vicinity of the absorption edge. N. N. Winogradoff—506
p-type photoconductivity and infrared quenching in electron-bombarded CdS. B. A. Kulp and R. H. Kelley—1290
Single-crystal molybdates for resonance and emission studies. G. Van Uitert, F. W. Swanekamp, and S. Preziosi —1176(L)
Some electrical and optical properties of ZnSe. M. Aven, D. T. F. Marple, and B. Segall—2261
Spatial coherence in the output of an optical maser. D. F. Nelson and R. J. Collins—739(L)
Spherical lenses for infrared and microwaves. G. Toraldo de Francia—2051(L)
Stimulated emission from HCN gas maser observed at 88.6 kMc. D. Marcuse—743(L)

Stress optical constants of germanium. K. J. Schmidt-Tiedemann—2058(L)
Theory of laser oscillations in Fabry-Perot resonators. J. Kotik and M. C. Newstein—178
Thermal tuning of ruby optical maser. I. D. Abella and H. Z. Cummins—1177(L)
Transparency of glass and certain plastics under shock attack. H. Dean Mallory and William S. McEwan—2421
Use of $PrCl_3$ in a solid-state infrared quantum counter. John F. Porter, Jr.—825
Use of $PrCl_3$ in a solid-state infrared quantum counter. John F. Porter—1803(E)
Vacuum-ultraviolet absorption studies of irradiated silica and quartz. C. M. Nelson and R. A. Weeks—883

Paramagnetic Amplifiers
Coupled mode theory of electron-beam parametric amplification. R. W. Gould and C. C. Johnson—248
Generalized coupled mode theory. M. C. Pease—1736
Parametric coupling between the transverse waves on *O*- and *M*-type beams. J. W. Klüver—1111
Stable-oscillation conditions for the magnetic-film parametron. Richard M. Sanders—478
Traveling wave analysis of a class of parametric amplifiers based upon the Hill equation. R. W. Fredricks—901

Photoconductivity and Photovoltaic Effects
Analysis of photojunctions formed by diffusing copper into insulating cadmium sulfide crystals. Robert R. Bockemuehl, James E. Kauppila, and David S. Eddy—1324
Confirmation of lifetimes by noise and by Haynes-Shockley method. Susumu Okazaki—712
Cross-section ratios of sensitizing centers in photoconductors. Richard H. Bube—1707
Crystal structure of photoelectric films of cesium antimonide. W. H. McCarroll—2051(L)
Detailed balance limit of efficiency of *p-n* junction solar cells. William Shockley and Hans J. Queisser—510
Effects of phosphor powder dispersion in electroluminescent lamps. W. A. Thornton—2379
Light scattering study of the annealing of drawn polyethylene. Marion B. Rhodes and Richard S. Stein—2344
Photoconductivity of CdS-type photoconductors in the vicinity of the absorption edge. N. N. Winogradoff—506
Photovoltaic effects in Cs_3Sb films. Frederick Wooten—1789(L)
Physical behavior of photographic grains. G. Sprague—2410
p-type photoconductivity and infrared quenching in electron-bombarded CdS. B. A. Kulp and R. H. Kelley—1290
Spectral response of solar cells. Brian Dale and F. P. Smith—1377
Temperature-dependent bismuth-cesium photosurfaces. R. J. Zollweg and C. R. Taylor—1316

Plasma Physics
A method for measuring the conductivity in a high electron density plasma. K. B. Persson—2631
Backward-wave microwave oscillations in a system composed of an electron beam and a hydrogen gas plasma. R. Targ and L. P. Levine—731
Conductivity of seeded atmospheric pressure plasmas. L. S. Frost—2029
Dynamic stability of a conducting, cylindrical shell in a magnetic field. J. G. Linhart—500
Excitation and amplification of cyclotron waves and thermal orbits in the presence of space charge. R. Adler, A. Ashkin, and E. I. Gordon—672
Experimental study of arc stability. I. J. D. Cobine and G. A. Farrall—328(E)
Fields in cavity-excited accelerators. E. G. Cristal and J. Van Bladel—1715
Induction-coupled plasma torch. Thomas B. Reed—821
Influence of the cathode surface on arc velocity. T. J. Lewis and P. E. Secker—54
Interpretation of experimental characteristics of cesium thermionic converters. E. N. Carabateas, S. D. Pezaris, and G. N. Hatsopoulos—352
Low-frequency oscillations in a filamentary cathode cesium. diode converter. K. P. Luke and F. E. Jamerson—321(L)
Microwave measurements of the radiation temperature of plasmas. G. Bekefi and Sanborn C. Brown—25
Microwave propagation through a magnetoplasma. R. L. Phillips, R. G. DeLosh, and D. E. White—551(L)
Microwave propagation through a magnetoplasma. R. L. Phillips, R. G. DeLosh, and D. E. White—1406(E)
Note on the mechanism of the multipactor effect. F. Paschke—747(L)
Oscillations and saturation current measurements in thermionic conversion cells. R. J. Zollweg and Milton Gottlieb—890
Production of high ions densities in helium by means of high explosives. G. E. Seay, L. B. Seely, Jr., and R. G. Fowler—2439
Propagation in a plasma. P. A. Clavier—578
Proposed diagnostic method for cylindrical plasmas. J. Shmoys—689
Radiation from a modulated electron beam with a plasma background. Philip Parzen—2484
Relaxation oscillations in a plasma diode. J. M. Rochard and G. W. Paxton—1171(L)
Resistance as dissipation into many reactive circuits: Landau damping and Nyquist's noise theorem. O. Buneman—1783(L)
Space-charge instabilities in electron diodes and plasma converters. C. K. Birdsall and W. B. Bridges—2611
Space charge instabilities in synthesized plasmas. A. L. Eichenbaum and K. G. Hernqvist—16
Theory of electron collection of spheric probes. G. Medicus—2512
Theory of microplasma instability in silicon. R. J. McIntyre—983
Wave interaction in plasma inhomogeneities. Lewis Wetzel—327(L)

Plastic Deformation (see also Defects in Solids-Dislocations)
Birefringence due to dislocations in glide bands of rocksalt single crystals. S. Mendelson—1999
Creep behavior of pore-free polycrystalline aluminum oxide. Robert C. Folweiler—773
Cross slip and cross climb of dislocations induced by a locked dislocation. James C. M. Li—593
Deformation-produced point defects. Howard K. Birnbaum and Floyd R. Tuler—1403(L)
Dislocation density and flow stress of sodium chloride. W. in der Schmitten and P. Hassen—1790
Effect of hydrostatic pressure on the high-temperature steady-state creep of lead. B. M. Butcher and A. L. Ruoff—2036
Effect of neutron irradiation on the plastic deformation of copper single crystals. I. G. Greenfield and H. G. F. Wilsdorf—827
Effect of torsional deformation on self-diffusion in silver. C. H. Lee and R. Maddin—1846
Elastic-plastic transition in copper crystals as determined by an etch-pit technique. F. W. Young, Jr.—1815
Electrical conductivity of NaCl during high-temperature creep. R. W. Christy and W. E. Daniels, Jr.—1265

Plastic Deformation (*continued*)
Electrically imploded-exploded aluminum tube. Eugene C. Cnare—1275
High-temperature kilocycle internal friction. R. J. Huber, G. S. Baker, and P. Gibbs—2573
Influence of deformation and temperature on the cobalt gamma irradiation of sodium chloride. Evidence for electrical interaction between dislocations and point defects. Rohn Truell—1601
Lattice parameter studies of impurity effects on plastic properties of lithium fluoride. W. L. Phillips, Jr.—751(L)
Nonbasal glide in dislocation-free cadmium crystals. I. The $(10\bar{1}1)$ $[1\bar{2}10]$ system. P. B. Price—1746
Nonbasal glide in dislocation-free cadmium crystals. II. The $(\bar{1}122)$ $[1\bar{1}23]$ system. P. B. Price—1750
On the internal friction of cold-worked and quenched martensitic iron and steel. T. Mura, I. Tamura, and J. O. Brittain—92
On the interpretation of internal friction experiments on strain aging of iron. J. C. Swartz—2048(L)
On the mechanical and thermal stability of low-angle boundaries in zinc single crystals. Sigmund Weissman, Makoto Hirabayashi, and Hiroshi Fujita—1156
Piezoelectricity of quartz for finite strain. S. Machlup and M. E. Christopher—1387
Polygonization in bent zinc crystals. P. P. Sinha and Paul A. Beck—1222
Relative polygonization rates in copper and copper-zinc alloys. W. E. Heitmann and R. W. Balluffi—963(L)
Self-diffusion in silver during plastic deformation in torsion. J. B. Darby, Jr., C. T. Tomizuka, and R. W. Balluffi—840
Shock wave compression of hardened and annealed 2024 aluminum. G. R. Fowles—1475
Slip patterns on boron-doped silicon surfaces. H. J. Queisser—1776
Strength of bulk fused quartz. William B. Hillig—741(L)
Stress distribution on the boundary of an elliptical hole in a large plate during passage of a stress pulse on long duration (major axis normal to the wave front). A. J. Durelli and W. F. Riley—1255
Stress and strain in thin films bulged over circular openings. Ralph Papirno—1175(L)
Temperature dependence of rolling textures in high-purity silver. Hsun Hu and R. S. Cline—760
Theory and application of a superposition model of internal friction and creep. J. Ross MacDonald—2385

Polymers (see also Glasses and Amorphous Solids)
Application of the three-parameter stress function to natural rubbers of widely different hardness. A. J. Carmichael and H. W. Holdaway—1724
Crack propagation in a strain-crystallizing elastomer. E. H. Andrews—452
Dielectric loss in poly-(hexamethylene adipamide) and poly-(hexamethylene sebacamide) at low temperatures. M. N. Stein, R. G. Lauttman, J. A. Sauer, and A. E. Woodward—2352
Dielectric properties and side-chain crystallinity of polyvinyl stearate. Martin G. Broadhurst, Edwin R. Fitzgerald, and Anthony J. Bur—972
Electric breakdown strength of single and laminated films of vinyl chloride-acetate. Robert G. Greenler and Robert M. Kay—1252
Extension of the Eyring-Ree theory of non-Newtonian flow. Joseph A. Faucher—2336
Frictional behavior of a simple rheological material. R. T. Spurr—1450
Growth of crystals from molten cross-linked oriented polyethylene. Jane T. Judge and Richard S. Stein—2357
Hypothesis of voids in semicrystalline polymers. Shiro Matsuoka—2334
Isothermal crystallization kinetics of polyethylene. II. Influence of the sample preparation. J. Rabesiaka and A. J. Kovacs—2314
Light scattering study of the annealing of drawn polyethylene. Marion B. Rhodes and Richard S. Stein—2344
Low-angle x-ray diffraction of crystalline nonoriented polyethylene and its relation to crystallization mechanisms. L. Mandelkern, A. S. Posner, A. F. Diorio, and D. E. Roberts—1509
Lubrication of polymers. C. Rubenstein—1445
Method for measuring dynamic mechanical properties of viscoelastic liquids and gels; the gelation of polyvinyl chloride. Meyer H. Birnboim and John D. Ferry—2305
Non-Newtonian viscosity of polymers. Roger S. Porter and Julian F. Johnson—2326
Origins of characteristic bands in the infrared spectra of isotactic polystyrene and isotactic poly (ring-d_5 styrene). T. Onishi and S. Krimm—2320
Phenomenological elastomechanical behavior of rubbers over wide ranges of strain. A. J. Carmichael and H. W. Holdaway—159
Properties of polyvinylidene fluoride. I. Dielectric measurements. Tunis Wentink, Jr.—1063
Rate of recrystallization of polyethylene single crystals. W. O. Statton—2332
Rolling friction of polymeric materials. II. Thermoplastics. D. G. Flom—1426
The swelling of unfilled and highly filled polymers. K. W. Bills, Jr., and F. S. Salcedo—2364
Thermorheological simplicity in extrusion flow curves of high ploymers. Katsuhiko Ito—1743
Transitions and relaxations in polytetrafluoroethylene. R. K. Eby and K. M. Sinnott—1765
Transparency of glass and certain plastics under shock attack. H. Dean Mallory and William S. McEwan—2421
Ultrasonic attenuation of longitudinal waves in plastics. Michel Auberger and John S. Rinehart—219
Use of idealized relaxation spectra in the interpretation of experimental results concerning polymer solutions. K. Walters—1975

Radiation Effects
Determination of the maximum lattice-chain energy from sputtering yield curves. Don E. Harrison, Jr.—924
Effect of electron bombardment on the near-infrared fluorescence of single-crystal CdS. B. A. Kulp—1966
Effect of neutron irradiation on the plastic deformation of copper single crystals. I. G. Greenfield and H. G. F. Wilsdorf—827
Effect of reactor fast neutrons on electron-hole recombination in germanium. A. Czachor and J. Piekoszewski—1837
Effects of monolayer adsorption and bombardment damage or Auger electron ejection from germanium. Homer D. Hagstrum—1015
Electron bombardment damage in silicon Esaki diodes. R. A. Logan, W. M. Augustyniak, and J. F. Gilbert—1201
Electron microscope study of radiation damage in graphite. W. Bollmann—869
Electron spin resonance in neutron-irradiated quartz. Robert H. Silsbee—1459
Energy dependence of radiation damage in tungsten. D. R. Muss and J. R. Townsend—189
Fission fragment damage to platinum. E. Reudl, P. Delavignette, and S. Amelinckx—2492(L)

Frequency factors for annealing fast-neutron induced density changes in vitreous silica. William Primak, Herman Szymanski, and David Keiffer—660
Hardening of LiF crystals by irradiation. J. S. Nadeau and W. G. Johston—2563
Influence of deformation and temperature on the cobalt gamma irradiation of sodium chloride. Evidence for electrical interaction between dislocations and points defects. Rohn Truell—1601
Mobility of radiation-induced defects in germanium. P. Baruch—653
p-type photoconductivity and infrared quenching in electron-bombarded CdS. B. A. Kulp and R. H. Kelley—1290
Radiation enhancement of bulk diffusion in 10% Zn–90% Cu by 30-kev Ne^+ ion bombardment. R. A. Arndt and R. L. Hines—1913
Stored energy in fuel-bearing graphites. A. H. Willis, J. M. Baugnet, and R. C. De Buekelaer—1622(L)
Study of electron bombardment of thin films. G. B. Gilbert, T. O. Poehler, and C. F. Miller—1597
Vacuum-ultraviolet absorption studies of irradiated silica and quartz. C. M. Nelson and R. A. Weeks—883

Scattering of Electromagnetic Waves
Electrical control of the critical angle of total reflection. H. Nassenstein—2488(L)
Imaginary part of x-ray scattering factor for germanium, comparison of theory and experiment. Boris W. Batterman—998
Infrared properties of flame-fused MnO crystals. E. Loh and R. Newman—470
Microwave analog to the scattering of light by nonspherical particles. J. Mayo Greenberg, Norman E. Pedersen, and Jeanne C. Pedersen—233
Shift of the shadow boundary and scattering cross section of an opaque object. S. I. Rubinow and Joseph B. Keller—814
Small-angle scattering in gold-nickel alloys. G. Nagorsen and B. L. Averbach—688
Wave interaction in plasma inhomogeneities. Lewis Wetzel—327(L)

Scattering of Particles
Back scattering of electrons. G. D. Archard—1505
Electron energy loss at low temperatures. E. Hörl and J. A. Suddeth—2521
Electron microscope investigation on the nature of tracks of fission products in mica. G. Bonfiglioli, A. Ferro, and A. Mojoni—2499
Interaction of slow electrons with insulating crystals. I. Absorption coefficient for cleaved alkali halides; Experimental techniques. C. J. Cook and William J. Fredericks—860
Spin waves in complex exchange-coupled lattices and neutron scattering. A. W. Saenz—752(E)

Semiconducting Devices (*p-n* Junctions)
Band structure parameters deduced from tunneling experiments. R. N. Hall and J. H. Racette—2078
Current-voltage characteristics of alloyed and diffused *p-n* junction diodes in InSb. Hans Juerg Stocker—322(L)
Detailed balance limit of efficiency of *p-n* junction solar cells. William Shockley and Hans J. Queisser—510
Determination of the semiconductor surface potential under a metal contact. N. J. Harrick—568
Effect of gaseous ambients upon 1/*f* noise in germanium filaments. F. E. Noble and J. E. Thomas, Jr.—1709
Electroluminescence at *p-n* junctions in gallium phosphide. M. Gershenzon and R. M. Mikulyak—1338
Electron bombardment damage in silicon Esaki diodes. R. A. Logan, W. M. Augustyniak, and J. F. Gilbert—1201
Electron emission from reverse-biased *p-n* junctions in SiC. Lyle Patrick—2047(L)
Electron-emission microscope and velocity distribution studies on silicon carbide *p-n* junction emitters. P. H. Gleichauf and V. Ozarow—549(L)
Electron mobilities and tunneling currents in silicon. R. A. Logan, J. F. Gilbert, and F. A. Trumbore—131(L)
Evidence for states (bands) in the forbidden gap of degenerate GaAs and InP—secondary tunnel currents and negative resistances. Nick Holonyak, Jr.—130(L)
Excess and hump current in Esaki diodes. Richard S. Claasen—2372
Extended curves of the space charge, electric field, and free carrier concentration at the surface of a semiconductor, and curves of the electrostatic potential inside a semiconductor. Charles E. Young—329
Excess noise in germanium and gallium-arsenide Esaki diodes in the negative resistance region. M. D. Montgomery—2408
Fast-risetime excitation scheme to achieve nonequilibrium and amplifying carrier distributions. George C. Dousmanis—2005
Gallium arsenide Esaki diodes for high-frequency applications. C. A. Burrus—1031
High-frequency silicon varactor diodes. C. A. Burrus—1166(L)
Impurity band conduction and the problem of excess current in tunnel diodes. T. P. Brody—746(L)
Negative resistance and hot electrons. I. Adawi—1101
New, thermally variable bead resistor. Victor J. Tennery and Russell G. West—1402(L)
Noise in InSb photodiodes. B. R. Pagel and R. L. Petritz—1901
Semiconducting stress transducers utilizing the transverse and shear piezoresistance effects. W. G. Pfann and R. N. Thurston—2008
Some electrical properties of zinc telluride—cadmium sulfide heterojunctions. M. Aven and D. M. Cook—960(L)
Some experiments using a vacuum-cleaned silicon *p-n* junction. J. T. Law—848
Some properties of *p-n* junctions in GaP. H. G. Grimmeiss and A. Rabenau—2123
Theory of tunneling. Evan O. Kane—83
Thermoelectric behavior of *p-n* junctions. Melvin Cutler—222
Uniformity of electrical current flow in cylindrical semiconductor specimens with cylindrical metallic end caps. R. Simon, J. H. Cahn, and J. C. Bell—46
Voltage dependence of microplasma density in *p-n* junctions in silicon. A. Goetzberger and C. Stephens—2646

Semiconductors, Compound
Analysis of photojunctions formed by diffusing copper into insulating cadmium sulfide crystals. Robert R. Bockemuehl, James E. Kauppila, and David S. Eddy—1324
Antimony edge dislocations in InSb. H. C. Gatos, M. C. Finn, and M. C. Lavine—1174(L)
Band structure of HgSe and HgSe-HgTe alloys. T. C. Harman and A. J. Strauss—2265
Band structure of the intermetallic semiconductors from pressure experiments. William Paul—2082
Band structure parameters deduced from tunneling experiments. R. N. Hall and J. H. Racette—2078
Bismuth-silver-oxygen-cesium photocathode. A. H. Sommer and W. E. Spicer—1036
Corbino disk. Milton Green—2047(L)
Corbino disk magnetoresistivity measurements on InSb. Milton Green—1286

Semiconductors, Compound (*continued*)
Current-voltage characteristics of alloyed and diffused *p-n* junction diodes in InSb. Hans Juerg Stocker—322(L)
Dangling bonds in III-V compounds. Harry C. Gatos—1232
de Haas-van Alphen effect in *p*-type PbTe and *n*-type PbS. P. J. Stiles, E. Burstein, and D. N. Langenberg—2174
Distribution coefficients of impurities in gallium antimonide. R. N. Hall and J. H. Racette—856
Diffusion of tin in gallium arsenide. B. Goldstein and H. Keller—1180(L)
Dislocation etch pits on bismuth telluride crystals. Iwao Teramoto and Shigetoshi Takayanagi—119(L)
Dislocations and stacking faults in aluminum nitride. P. Delavignette, H. B. Kirkpatrick, and S. Amelinckx—1098
Dislocations in silicon carbide. S. Amelinckx, G. Strumane, and W. W. Webb—1182(E)
Double phonon processes in cadmium sulfide. Minko Balkanski and Jean Michel Besson—2292
Edge emission in zinc selenide single crystals. D. C. Reynolds, L. S. Perdotti, and O. W. Larson—2250
Effect of freezing conditions on the thermoelectric properties of $BiSbTe_3$ crystals. G. J. Cosgrove, J. P. McHugh, and W. A. Tiller—621
Effect of pressure on the energy gap of Bi_2Te_3. Che-Yu Li, A. L. Ruoff, and C. W. Spencer—1733
Effects of doping additions on the thermoelectric properties of the intrinsic semiconductor $Bi_2Te_{2.1}Se_{0.9}$. L. C. Bennett and J. R. Wiese—562
Electrical and optical properties of mercury selenide (HgSe). H. Gobrecht, U. Gerhardt, B. Peinemann, and A. Tausend—2246
Electrical and optical properties of the II-V compounds. W. J. Turner, A. S. Fischler, and W. E. Reese—2241
Electrical properties of lead telluride. Yasuo Kanai, Riro Nii, and Naozo Watanabe—2146
Electron emission from reverse-biased *p-n* junctions in SiC. Lyle Patrick—2047(L)
Electron-emission microscope and velocity distribution studies on silicon carbide *p-n* junction emitters. P. H. Gleichauf and V. Ozarow—549(L)
Electron spin resonance in semiconducting rutile. P. F. Chester—2233
Energy of spectrum and scattering of current carriers in gallium arsenide. D. N. Naseledov—2140
Energy band structure of gallium antimonide. W. M. Becker, A. K. Ramdas, and H. Y. Fan—2094
Evidence for states (bands) in the forbidden gap of degenerate GaAs and InP—secondary tunnel currents and negative resistances. Nick Holonyak, Jr.—130(L)
Excess noise in germanium and gallium-arsenide Esaki diodes in the negative resistance region. M. D. Montgomery—2408
Exciton states and band structure in CdS and CdSe. J. J. Hopfield—2277
Exciton structure and Zeeman effects in cadmium selenide. J. O. Dimmock and R. G. Wheeler—2271
Excitons and band splitting produced by uniaxial stress in CdTe. D. G. Thomas—2298
Excitons and the absorption edge of ZnO. R. E. Dietz, J. J. Hopfield, and D. G. Thomas—2282
Field-enhanced donor diffusion in degenerate semiconductor layers. W. Shockley—1402(L)
Free carrier cyclotron resonance, Faraday rotation, and Voigt double refraction in compound semiconductors. E. D. Palik, S. Teitler, and R. F. Wallis—2132
Fundamental reflectivity spectrum of semiconductors with zinc-blende structure. Manuel Cardona—2151
Gallium arsenide Esaki diodes for high-frequency applications. C. A. Burrus—1031
Galvanomagnetic effects in III-V compound semiconductors. A. C. Beer—2107
Galvanomagnetic properties of InSb. H. Weiss—2064
Germanium saturated with gallium antimonide. J. O. McCaldin and D. B. Wittry—65
Growth of ZnSb single crystals. R. L. Eisner, R. Mazelsky, and W. A. Tiller—1833
Growth twins in indium antimonide. R. K. Mueller and R. L. Jacobson—550(L)
Growth twins in indium antimonide. R. K. Mueller and R. L. Jacobson—1406(E)
Impurity striations in unrotated crystals of InSb. H. C. Gatos, A. J. Strauss, M. C. Lavine, and T. C. Harmon—2057(L)
Influence of arsenic pressure on the doping of gallium arsenide with germanium. J. O. McCaldin and Roy Harada—557(L)
Influence of the Hall effect upon the transverse magnetoresistance in indium antimonide. Charles A. Simmons—1970
Influence of magnetoconductivity discontinuities on galvanomagnetic effects in indium antimonide. R. T. Bate, J. C. Bell, and A. C. Beer—806
Interband Faraday rotation in III-V compounds. Benjamin Lax and Yuichiro Nishina—2128
Interrelation of electronic properties and defect equilibria in PbTe. E. Miller, K. Komarek, and I. Cadoff—2457
Investigations on silicon carbide. H. J. van Daal, C. A. A. J. Greebe, W. F. Knippenberg, and H. J. Vink—2225
Investigations on SnS. W. Albers, C. Haas, H. J. Vink, and J. D. Wasscher—2220
Halides, oxides, and sulfides of the transition metals. F. J. Morin—2195
Heitler-London approach to electrical conductivity. Jiro Yamashita—2215
Lattice absorption in gallium arsenide. W. Cochran, S. J. Fray, F. A. Johnson, J. E. Quarrington, and N. Williams—2102
Magnetoreflection experiments in intermetallics. George B. Wright and Benjamin Lax—2113
Magnetotunneling in lead telluride. R. H. Rediker and A. R. Calawa—2189
Measurement of minority carrier lifetime in SiC by a novel electroluminescent method. G. G. Harman and R. L. Raybold—1168(L)
Model for the electronic transport properties of mixed valency semiconductors. R. C. Miller, R. R. Heikes, and R. Mazelsky—2202
Nonohmic behavior in near-stoichiometric rutile (TiO_2). E. H. Greener and D. H. Whitmore—1320
Optical absorption edge in GaAs and its dependence on electric field. T. S. Moss—2136
Optical properties of free electrons in CdS. W. W. Piper and D. T. F. Marple—2237
Optical properties of lead-salt and III-V semiconductors. Frank Stern—2166
Optical studies of the band structure of InP. Manuel Cardona—958(L)
Oscillatory magnetoabsorption in InSb under high resolution. S. Zwerdling, W. H. Kleiner, and J. P. Theriault—2118
Oscillatory magnetoresistance in the conduction band of PbTe. K. F. Cuff, M. R. Ellett, and C. D. Kuglin—2179
Phase diagram for the pseudobinary system Ag_2Te-Sb_2Te_3. J. P. McHugh, W. A. Tiller, S. E. Haszko, and J. H. Wernick—1785(L)

Photoconductivity of CdS-type photoconductors in the vicinity of the absorption edge. N. N. Winogradoff—506
Piezoelectric scattering and phonon drag in ZnO and CdS. A. R. Hutson—2287
Polaron band model and its application to Ce-S semiconductors. J. Appel and S. W. Kurnick—2206
Preparation of monocrystalline cuprous oxide. Yukiko Ebisuzaki—2027
Properties of high-resistivity gallium arsenide compensated with diffused copper. Joseph Blanc, Richard H. Bube, and Harold E. MacDonald—1666
Properties of semi-insulating GaAs. C. H. Gooch, C. Hilsum, and B. R. Holeman—2069
Presence of carbon in gallium phosphide crystals. C. J. Frosch, M. Gershenzon, and L. Derick—2060(L)
p-type photoconductivity and infrared quenching in electron-bombarded CdS. B. A. Kulp and R. H. Kelley —1290
Recent studies of bismuth telluride and its alloys. H. J. Goldsmid—2198
Recent studies on rutile (TiO_2). H. P. R. Frederikse—2211
Righi-Leduc effect in mercuric selenide. Charles R. Whitsett—2257
Semiconducting "compound" $AgFeTe_2$. J. H. Wernick and R. Wolfe—749(L)
Semiconducting properties of inorganic amorphous materials. H. L. Uphoff and J. H. Healy—950
Some electrical and optical properties of ZnSe. M. Aven, D. T. F. Marple, and B. Segall—2261
Some electrical properties of zinc telluride—cadmium sulfide heterojunctions. M. Aven and D. M. Cook—960(L)
Some properties of HgSe-HgTe solid solutions. M. Rodot, H. Rodot, and R. Triboulet—2254
Some properties of *p-n* junctions in GaP. H. G. Grimmeiss and A. Rabenau—2123
Study of band structure of intermetallic compounds by pressure experiments. A. Sagar and R. C. Miller—2073
Thermal expansion and related bonding problems of some III-V compound semiconductors. Leonard Bernstein and Robert J. Beals—122(L)
Thermoelectric properties of Ag_2Te. P. F. Taylor and C. Wood—1
Valence bands in lead telluride. R. S. Allgaier—2185
Vapor phase growth and properties of zinc sulfide single crystals. Harold Samelson—309
Vapor-phase growth of single crystals of II-VI compounds. W. W. Piper and S. J. Polich—1278

Semiconductors, Elemental

Anodic oxidation of germanium. T. Gabor—1361
Band structure and transport properties of some 3-5 compounds. H. Ehrenreich—2155
Catalytic activity of *p*- and *n*- type germanium. William H. Watson, Jr.—120(L)
Current flow across grain boundaries in *n*-type germanium. I. R. K. Mueller—635
Current flow across grain boundaries in *n*-type germanium. II. R. K. Mueller—640
Effects of monolayer adsorption and bombardment damage or Auger electron ejection from germanium. Homer D. Hagstrum—1015
Effect of reactor fast neutrons on electron-hole recombination in germanium. A. Czachor and J. Piekoszewski —1837
Electron bombardment damage in silicon Esaki diodes. R. A. Logan, W. M. Augustyniak, and J. F. Gilbert —1201
Electron mobilities and tunneling currents in silicon. R. A. Logan, J. F. Gilbert, and F. A. Trumbore—131(L)
Enantiomorphous character of etch pits in tellurium. J. S. Blakemore and K. C. Nomura—745(L)
Excess noise in germanium and gallium-arsenide Esaki diodes in the negative resistance region. M. D. Montgomery—2408
Germanium films on germanium obtained by thermal evaporation in vacuum. O. Weinreich, G. Dermit, and C. Tufts—1170(L)
Germanium saturated with gallium antimonide. J. O. McCaldin and D. B. Wittry—65
High-field conductivity in germanium and silicon at microwave frequencies. J. Zucker, V. J. Fowler, and E. M. Conwell—2606
High-frequency silicon varactor diodes. C. A. Burrus —1166(L)
Imaginary part of x-ray scattering factor for germanium. Comparison of theory and experiment. Boris W. Batterman—998
Influence of conductivity gradients on galvanomagnetic effects in semiconductors. R. T. Bate and A. C. Beer —800
Investigation of the sputtering of silicon. S. P. Wolsky and E. J. Zdanuk—782
Majority carrier magnetosurface effect. Robert D. Larrabee—2019
Morphology and growth mechanism of silicon ribbons. R. S. Wagner and R. G. Treuting—2490(L)
Oxygen adsorption on silicon and germanium. Homer D. Hagstrum—1020
Perfection of the lattice of dislocation-free silicon, studied by the lattice-constant and density method. M. E. Straumanis, P. Borgeaud, and W. J. James—1382
Preparation of silicon ribbons. E. S. Greiner, J. A. Gutowski, and W. C. Ellis—2489(L)
Preparation of single-crystal boron. Claude P. Talley —1787(L)
Properties of heavily doped *n*-type germanium. W. G. Spitzer, F. A. Trumbore, and R. A. Logan—1822
Recombination kinetics for thermally dissociated Li-B pairs in Si. E. M. Pell and F. S. Ham—1052
Recombination of excess carriers at twin structures in germanium. J. P. McKelvey—442
Residual thermoelastic stresses in bonded silicon wafers. T. D. Riney—454
Short minority carrier diffusion lengths. A. M. Goodman —2550
Slip patterns on boron-doped silicon surfaces. H. J. Queisser—1776
Solubility of oxygen in germanium. W. Kaiser and C. D. Thurmond—115
Stress optical constants of germanium. K. J. Schmidt-Tiedemann—2058(L)
Study of Li-O interaction in Si by ion drift. E. M. Pell —1048
Surface electrical changes caused by the adsorption of hydrogen and oxygen on silicon. J. T. Law—600
Surface kinetics and physics investigation of the reaction between single-crystal germanium and iodine. W. J. Heinecke and S. Ing, Jr.—1498
Surface potential of silicon. C. T. Raymo, C. W. Brands, and B. Schwartz—1165(L)
Textural properties of germanium films. John E. Davey —877
Theory of microplasma instability in silicon. R. J. McIntyre—983
Third-order elastic moduli of germanium. T. Bateman, W. P. Mason, and H. J. McSkimin—928
Voltage dependence of microplasma density in *p-n* junctions in silicon. A. Goetzberger and C. Stephens—2646

Shock Waves (see also Explosions)
Initiation of a low-density PETN pressing by a plane shock wave. G. E. Seay and L. B. Seely, Jr.—1092
Multiple shock wave structures in polycrystalline ferroelectrics. C. E. Reynolds and G. E. Seay—1401(L)
On the possibility of detecting shock-induced second-order phase transitions in solids. The equation of state of invar. D. R. Curran—1811
Production of high ion densities in helium by means of high explosives. G. E. Seay, L. B. Seely, Jr, and R. G. Fowler—2439
Shock wave compression of hardened and annealed 2024 aluminum. G. R. Fowles—1475
Shock-wave compression of iron and bismuth. D. S. Hughes, L. E. Gourley, and Mary F. Gourley—624
Smooth spalls and the polymorphism of iron. John O. Erkman—939
Study of impact cratering in sand. F. L. Culp and H. L. Hooper—2480

Space Charge (see also Electrostatic Fields)
Charged cylindrical tube. T. R. Ferguson and R. H. Duncan—1385
Determination of the semiconductor surface potential under a metal contact. N. J. Harrick—568
Effects of phosphor powder dispersion in electroluminescent lamps. W. A. Thornton—2379
Electrical conduction and breakdown in high pressure (0125–300 mm) rare gases. R. Forman—1651
Electric strength of rutile single crystals. D. A. Powers and I. J. T. Johansen—1083
Electroluminescence at *p-n* junctions in gallium phosphide. M. Gershenzon and R. M. Mikulyak—1338
Excitation and amplification of cyclotron waves and thermal orbits in the presence of space charge. R. Adler, A. Ashkin, and E. I. Gordon—672
Experimental study of arc stability. I. J. D. Cobine and G. A. Farrall—328(E)
Extended curves of the space charge, electric field, and free carrier concentration at the surface of a semiconductor, and curves of the electrostatic potential inside a semiconductor. Charles E. Young—329
Field-enhanced donor diffusion in degenerate semiconductor layers. W. Shockley—1402(L)
Full-voltage range spark-gap crowbar. Eli M. Goldfarb and Harry G. Heard—326(L)
On three-dimensional space charge flow. J. Rosenblatt —1803(E)
Polarization and diffusion in a silicate glass. R. J. Charles —1115
Reflection of electromagnetic waves at electron density ramps. Leonard S. Taylor—1796(L)
Space-charge instabilities in electron diodes and plasma converters. C. K. Birdsall and W. B. Bridges—2611
Space charge instabilities in synthesized plasmas. A. L. Eichenbaum and K. G. Hernqvist—16
Stress distribution on the boundary of an elliptical hole in a large plate during passage of a stress pulse of long duration (major axis normal to the wave front). A. J. Durelli and W. F. Riley—1255
Surface potential of silicon. C. T. Raymo, C. W. Brands, and B. Schwartz—1165(L)

Space Physics
Man-made heating and ionization of the upper atmosphere. P. A. Clavier—570
Man-made heating and ionization of the upper atmosphere. P. A. Clavier—2651(E)
Surface electrical changes caused by the adsorption of hydrogen and oxygen on silicon. J. T. Law—600

Spectra and Spectroscopy
Determination of certain spectral distributions of soft x-rays by theoretical analysis of absorption experiments. Nancy A. Kerr—2465
Optical and infrared spectra of the ferrites and garnets. Kenneth A. Wickersheim—205S
Origins of characteristic bands in the infrared spectra of isotactic polystyrene and isotactic poly (ring-d_5 styrene). T. Onishi and S. Krimm—2320
Spectral response of solar cells. Brian Dale and F. P. Smith—1377

Sputtering
Determination of the maximum lattice-chain energy from sputtering yield curves. Don E. Harrison, Jr.—924
Etch effects from oblique-incidence ion bombardment. G. D. Magnuson, B. B. Meckel, and P. A. Harkins —369
Guidance and collimation of sputtered tungsten particles. Carl A. Ludeke—1400(L)
Investigation of the sputtering of silicon. S. P. Wolsky and E. J. Zdanuk—782
Magnetic thin films prepared by sputtering. Eric Kay —99S
Mercury ion beam sputtering of metals at energies 4–15 kev. G. K. Wehner and D. Rosenberg—887
Sputtering of vitreous silica by 20- to 60-kev Xe^+ ions. R. L. Hines and R. Wallor—202
Sputtering yields of metals for Ar^+ and Ne^+ ions with energies from 50 to 600 ev. Nils Laegreid and G. K. Wehner—365
Some properties of uniaxial permalloy films prepared by cathodic sputtering. M. H. Francombe and A. J. Noreika —97S

Superconductivity, Superconductors
Effect of residual gases on superconducting characteristics of tin films. Hollis L. Caswell—105
Field solution for a thin-film superconducting strip transmission line. James C. Swihart—461
Production of magnetic fields exceeding 15 kilogauss by a superconducting solenoid. J. E. Kunzler, E. Buehler, F. S. L. Hsu, B. T. Matthias, and C. Wahl—325(L)
Superconductor-transition switching time measurements using a superconductive radio-frequency mixer. Donald L. Feucht and James B. Woodford, Jr.—1882

Surface Properties (Etching) (see also Sputtering)
Anodic oxidation of germanium. T. Gabor—1361
Attainment of ultrahigh vacua, reduction in surface desorption, and the adsorption of hydrogen by evaporated molybdenum. Angus L. Hunt, Charles C. Damm, and Earl C. Popp—1937
Catalytic activity of *p*- and *n*-type germanium. William H. Watson, Jr.—120(L)
Dangling bonds in III-V compounds. Harry C. Gatos —1232
Direct observation in the electron microscope of oxide layers on aluminum. K. Thomas and M. W. Roberts —70
Dislocation etching solution for potassium chloride and other alkali halides. J. S. Cook—2492(L)
Dislocation etch pits on the basal plane of zinc crystals. H. S. Rosenbaum and M. M. Saffren—1856
Dissociation of adsorbed CO by slow electrons. George E. Moore—1241
Effect of residual gases on the properties of indium films. H. L. Caswell—2641
Effect of temperature on the emission of electrons from abraded surfaces of beryllium, calcium, aluminum, and magnesium. T. C. Ku and W. T. Pimbley—124(L)

Effect of temperature on the exoemission of electrons from abraded aluminum surfaces. W. T. Pimbley and E. E. Francis—1729
Effects of monolayer adsorption and bombardment damage or Auger electron ejection from germanium. Homer D. Hagstrum—1015
Elastic-plastic transition in copper crystals as determined by an etch-pit technique. F. W. Young, Jr.—1815
Etch effects from oblique-incidence ion bombardment. G. D. Magnuson, B. B. Meckel, and P. A. Harkins —369
Etch pits in electroluminescent zinc sulfide crystallites. Paul Goldberg—1520
Friction and adhesion of clean and contaminated mica surfaces. Anita I. Bailey—1407
Improved representation of calculated surface mobilities in semiconductors. I. Minority carriers. N. B. Grover, Y. Goldstein, and A. Many—2538
Improved representation of calculated surface mobilities in semiconductors. II. Majority carriers. Y. Goldstein, N. B. Grover, and A. Many—2540
Influence of surface energy on friction and wear phenomena. E. Rabinowicz—1440
Iron whisker surface rearrangements resulting from the hydrogen reduction of oxides and from thermal etching. J. V. Laukonis and R. V. Coleman—242
Kinetic and experimental basis of flash desorption. Gert Ehrlich—4
Liquidlike layers on ice. H. H. G. Jellinek—1793(L)
Mechanism of chemisorption, place exchange, and oxidation on a (100) nickel surface. H. E. Farmsworth and Hannibal H. Madden, Jr.—1933
(110) nickel surface. L. H. Germer, A. U. MacRae, and C. D. Hartman—2432
Orientation-dependent dissolution of lithium fluoride. M. B. Ives—1534
Oxygen adsorption on silicon and germanium. Homer D. Hagstrum—1020
Reactions of oxygen with pure tungsten and tungsten containing carbon. J. A. Becker, E. J. Becker, and R. G. Brandes—411
Slip patterns on boron-doped silicon surfaces. H. J. Queisser—1776
Some experiments using a vacuum-cleaned silicon *p-n* junction. J. T. Law—848
Surface electrical changes caused by the adsorption of hydrogen and oxygen on silicon. J. T. Law—600
Surface kinetics and physics investigation of the reaction between single-crystal germanium and iodine. W. J. Heinecke and S. Ing, Jr.—1498
Surface layer in $BaTiO_3$ single crystals. Ennio Fatuzzo and Walter J. Merz—1685
Surface layers on barium titanate single crystals above the Curie point. H. Schlosser and M. E. Drougard—1227
Textural properties of germanium films. John E. Davey —877

Thermal Conductivity and Diffusivity

Experimental study of intermetallic diffusion in large temperature gradients. C. J. Meechan—945
Flash method of determining thermal diffusivity, heat capacity, and thermal conductivity. W. J. Parker, R. J. Jenkins, C. P. Butler, and G. L. Abbott—1679
Proposed method of measuring thermal diffusivity at high temperatures. Robert D. Cowan—1363
Pulse method for the measurement of thermal diffusivity of metals. Edwin L. Woisard—40
Thermal conductivity in two-phase alloys. J. B. Schroeder —1798(L)
Thermal conductivity of porous media. I. Unconsolidated sands. W. Woodside and J. H. Messmer—1688
Thermal conductivity of porous media. II. Consolidated rocks. W. Woodside and J. H. Messmer—1699

Thermodynamic Properties

Available power from a nonideal thermal source. Paul Penfield, Jr.—1794(L)
Curie temperature of some garnets by the differential thermal analysis technique. A. Aharoni, E. H. Frei, Z. Scheidlinger, and M. Schieber—1851
Effect of magnetic clusters on the specific heat of Ni-Cu and Fe-V alloys. K. Schröder—880
Electrical resistivity of chromium in the vicinity of the Néel temperature. M. J. Marcinkowski and H. A. Lipsitt—1238
Flash method of determining thermal diffusivity, heat capacity, and thermal conductivity. W. J. Parker, R. J. Jenkins, C. P. Butler, and G. L. Abbott—1679
Measurement of the partial pressure of cesium over cesium antimonides. Kiyoshi Miyake—1132
Monotonic trap distributions. Richard H. Bube—1621(L)
Specific heat of superparamagnetic particles. J. D. Livingston and C. P. Bean—1964
Stored energy in fuel-bearing graphites. A. H. Willis, J. M. Baugnet, and R. C. De Buekelaer—1622(L)
Temperature-compensated Debye temperature of carbonyl iron. Charles P. Gazzara and Raymond M. Middleton —1546
Theoretical bound on the thermoelectric figure of merit from irreversible thermodynamics. Howard Littman and Burton Davidson—217
Thermal expansion and related bonding problems of some III-V compound semiconductors. Leonard Bernstein and Robert J. Beals—122(L)
Thermodynamics of thermally regenerated fuel cells. J. B. Friauf—616

Thermoelectricity

Effect of pressure on emf of thermocouples. F. P. Bundy —483
Effects of doping additions on the thermoelectric properties of the intrinsic semiconductor $Bi_2Te_{2.7}Se_{0.3}$. L. C. Bennett and J. R. Wiese—562
Effect of freezing conditions on the thermoelectric properties of $BiSbTe_3$ crystals. G. J. Cosgrove, J. P. McHugh, and W. A. Tiller—621
Calculations of the thermoelectric parameters and the maximum figure of merit for acoustical scattering. Louis R. Testardi—1978
Electrical conductivity and thermoelectric effect in single-crystal TiC. Lewis E. Hollander, Jr.—996
Low temperature thermoelectric power of the rare-earth metals. H. J. Born, Sam Legvold, and F. H. Spedding —2543
Peltier coefficient at high current levels. John R. Reitz —1623(L)
Recent studies of bismuth telluride and its alloys. H. J. Goldsmid—2198
Response of a thermocouple circuit to nonsteady currents. Thomas T. Arai and John R. Madigan—609
Theoretical bound on the thermoelectric figure of merit from irreversible thermodynamics. Howard Littman and Burton Davidson—217
Theory and experiment of a thermoelectric cooler. M. H. Norwood—2559
Thermoelectric behavior of *p-n* junctions. Melvin Cutler —222
Thermoelectric measurements at small-area contacts. M. Cutler—1075
Thermoelectric properties of Ag_2Te. P. F. Taylor and C. Wood—1

Thermoelectricity (*continued*)
Transient response of a thermocouple circuit under steady currents. Allen D. Reich and John R. Madigan—294
Zero-, first-, and second-order theories of a general thermocouple. A. H. Boerdijk—1584
Thin Films
Angular dependence of torque in anisotropic permalloy films. W. D. Doyle, J. E. Rudisill, and S. Shtrikman —1785(L)
Anisotropy in nickel-iron films. D. O. Smith—70S
Anisotropy in permalloy films evaporated at grazing incidence. M. S. Cohen—87S
Anisotropy rotation in thin permalloy films at room temperature. T. Matcovich, E. Korostoff, and A. Schmeckenbecher—93S
Annealing behavior and temperature dependence of the magnetic properties of thin permalloy films. Armin Segmüller—89S
Annealing of oblique-incidence permalloy films. G. P. Weiss and D. O. Smith—85S
Characteristics of the annealing kinetics of tin films deposited at 88°K. J. Priest, C. Chiou, and H. L. Caswell —1772
Crystal structure of photoelectric films of cesium antimonide. W. H. McCarroll—2051(L)
Cube texture in ultrathin molybdenum permalloy tape. P. K. Koh—358S
Damping effects of thin surface films. R. J. Huber, G. S. Baker, and P. Gibb—2488(L)
Effect of residual gases on superconducting characteristics of tin films. Hollis L. Caswell—105
Effect of residual gases on the properties of indium films. H. L. Caswell—2641
Elastic modulus of amorphous nickel films. Stanko Jovanovic and Cyril Stanley Smith—121(L)
Electric breakdown strength of single and laminated films of vinyl chloride-acetate. Robert G. Greenler and Robert M. Kay—1252
Epitaxial growth and magnetic properties of single-crystal films of iron, nickel, and permalloy. Soshin Chikazumi —81S
Ferrite thin films. Henry P. Lemaire and William J. Croft —46S
Ferromagnetic resonance in thin magnetic films at radio frequencies. Turner E. Hasty and Lee J. Boudreaux —1807
Field solution for a thin-film superconducting strip transmission line. James C. Swihart—461
Forbidden reflections in electron diffraction patterns of evaporated tin films. Richard W. Vook—2474
Formation conditions and structure of thin epitaxial silver films on rocksalt. Billy W. Sloope and Calvin O. Tiller —1331
Free oscillations of the magnetization in permalloy films. Peter Wolf—95S
Germanium films on germanium obtained by thermal evaporation in vacuum. O. Weinreich, G. Dermit, and C. Tufts—1170(L)
Influence of nearby conductors on thin-film switching. J. S. Eggenberger—752(E)
Interference method for measuring the thickness of epitaxially grown films. W. G. Spitzer and M. Tanenbaum—744(L)
Magnetic anisotropies of nickel films evaporated and measured at 10^{-8} mm Hg and below. C. D. Graham, Jr., and J. M. Lommel—83S
Magnetic film devices using passive loading. J. M. Daughton, T. A. Smay, A. V. Pohm, and A. A. Read—36S
Magnetic thin films prepared by sputtering. Eric Kay—99S
Magnetoresistance and magnetic switching in permalloy films. R. L. Coren and H. J. Juretschke—292S
Ni-Fe single-crystal films and their magnetic characteristics. R. R. Verderber and B. M. Kostyk—696
Nonlinear effects of Z-directed spin waves in thin films. Jerome I. Kaplan—1831
Nucleation processes in thin permalloy films. S. Methfessel, S. Middelhoek, and H. Thomas—294S
Nuclear resonances in cubic, hexagonal, and mixed phase cobalt powders and thin films. Wilton A. Hardy—122S
Oblique-incidence anisotropy in evaporated films. M. S. Cohen, D. O. Smith, and G. P. Weiss—1405(E)
Partial rotation in permalloy films. S. Methfessel, S. Middelhoek, and H. Thomas—1959
Photovoltaic effects in Cs_3Sb films. Frederick Wooten—1789(L)
Preparation and properties of thin ferrite films. E. Banks, N. H. Riederman, H. W. Schleuning, and L. M. Silber —44S
Properties of thin antimony films deposited in high vacuum. George A. Condas and Frederick O. Wooten—323(L)
Rotatable anisotropy in thin permalloy films. R. J. Prosen, J. O. Holmen, and B. E. Gran—91S
Single-crystal tin films. Richard W. Vook—1557
Some properties of uniaxial permalloy films prepared by cathodic sputtering. M. H. Francombe and A. J. Noreika —97S
Spiral walls in thin magnetic films. Harrison W. Fuller, Harvey Rubinstein, and Donald L. Sullivan—286S
Stress and strain in thin films bulged over circular openings. Ralph Papirno—1175(L)
Study of electron bombardment of thin films. G. B. Gilbert, T. O. Poehler, and C. F. Miller—1597
Textural properties of germanium films. John E. Davey —877
Thin-film switching in the hard direction by wall motion. Robert J. Spain and Harvey Rubinstein—288S
Transient effects in Peltier coolers. A. D. Reich, T. Arai, and J. R. Madigan—2493(L)
Use of monomolecular layers in evaporated-film tunneling devices. J. L. Miles and H. O. McMahon—1176(L)
Vacuum Techniques
Attainment of ultrahigh vacua, reduction in surface desorption, and the adsorption of hydrogen by evaporated molybdenum. Angus L. Hunt, Charles C. Damm, and Earl C. Popp—1937
Germanium films on germanium obtained by thermal evaporation in vacuum. O. Weinreich, G. Dermit, and C. Tufts—1170(L)
Hot-cathode magnetron ionization gauge for the measurement of ultrahigh vacua. J. M. Lafferty—424
Kinetic and experimental basis of flash desorption. Gert Ehrlich—4
Properties of thin antimony films deposited in high vacuum. George A. Condas and Frederick O. Wooten—323(L)
Some experiments using a vacuum-cleaned silicon p-n junction. J. T. Law—848
Viscosity and Viscoelasticity
Flow of gas through porous media in the region between molecular and viscous condition. E. H. Hirsch—977
Method for measuring dynamic mechanical properties of viscoelastic liquids and gels; the gelation of polyvinyl chloride. Meyer H. Birnboim and John D. Ferry—2305
Non-Newtonian viscosity of polymers. Roger S. Porter and Julian F. Johnson—2326
Thermorheological simplicity in extrusion flow curves of high polymers. Katsuhiko Ito—1743
Use of idealized relaxation spectra in the interpretation of experimental results concerning polymer solutions. K. Walters—1975
